4-1 Think About a Plan
Congruent Figures

Algebra  Find the values of the variables.

Know

1. What do you know about the measure of each of the non-right angles?
   The measure of each of the non-right angles are complementary.

2. What do you know about the length of each of the legs?
   All of the legs are equal in length.

3. What types of triangles are shown in the figure?
   isosceles right triangles

Need

4. What information do you need to know to find the value of $x$?
   You need to know that the measure of each of the non-right angles is 45.

5. What information do you need to know to find the value of $t$?
   You need to know that the length of each of the legs is 4 in.

Plan

6. How can you find the value of $x$? What is its value?
   Answers may vary. Sample: Set $3x$ equal to 45. So, $3x = 45; x = 15$.

7. How do you find the value of $t$? What is its value?
   Answers may vary. Sample: Set $2t$ equal to 4. So, $2t = 4; t = 2$. 
Each pair of polygons is congruent. Find the measures of the numbered angles.

1. \( \triangle CAT \cong \triangle JSD \). List each of the following.
   - \( \angle 1 = 110 \); \( \angle 2 = 120 \)
   - \( \angle 3 = 90 \); \( \angle 4 = 135 \)

4. three pairs of congruent sides
   - \( CA \cong JS \), \( AT \cong SD \), \( CT \cong JD \)

5. three pairs of congruent angles
   - \( \angle C \cong \angle J \), \( \angle A \cong \angle S \), \( \angle T \cong \angle D \)

WXYZ \cong JKLM. List each of the following.

6. four pairs of congruent sides
   - \( WZ \cong JM \), \( WX \cong JK \), \( XY \cong KL \), \( ZY \cong ML \)

7. four pairs of congruent angles
   - \( \angle W \cong \angle J \), \( \angle X \cong \angle K \), \( \angle Y \cong \angle L \), \( \angle Z \cong \angle M \)

For Exercises 8 and 9, can you conclude that the triangles are congruent? Justify your answers.

8. \( \triangle GHJ \) and \( \triangle IHJ \) Yes; \( \angle GHJ \cong \angle IHJ \) by Third Angles Thm. and by the Refl. Prop. \( JH \cong JH \). Therefore, \( \triangle GHJ \cong \triangle IHJ \) by the Def. of \( \cong \) triangles.

9. \( \triangle QRS \) and \( \triangle TSV \) No; \( \angle QSR \cong \angle TSV \) because vert. angles are \( \cong \), and \( \angle QRS \cong \angle TVS \) by Third Angles Thm., but none of the sides are necessarily \( \cong \).

10. Developing Proof Use the information given in the diagram. Give a reason that each statement is true.
   a. \( \angle L \cong \angle Q \) Given
   b. \( \angle LNM \cong \angle QNP \) Vert. angles are \( \cong \).
   c. \( \angle M \cong \angle P \) Third Angles Thm.
   d. \( LM \cong QP \), \( LN \cong QN \), \( MN \cong PN \) Given
   e. \( \triangle LNM \cong \triangle QNP \) Def. of \( \cong \) triangles
For Exercises 11 and 12, can you conclude that the figures are congruent? Justify your answers.

11. $AEFD$ and $EBCF$
   
   **No; answers may vary. Sample:**
   
   $\angle D$ does not have to be a right angle.

12. $\triangle FGH$ and $\triangle JKH$
   
   **Yes; answers may vary. Sample:**
   
   $\angle F \cong \angle J$ and $\angle G \cong \angle K$ by the Alt. Int. Angles Thm. and $\angle FGH \cong \angle JHK$ by the Vert. Angles Thm., so all corresp. parts are congruent.

**Algebra** Find the values of the variables.

13. $\triangle ABC$
   
   $74^\circ, (5x)^\circ, (3x + 2)^\circ$

14. $\triangle DEF$
   
   $2x, 10^\circ$

**Algebra** $ABCD \cong FGHJ$. Find the measures of the given angles or lengths of the given sides.

15. $m\angle B = 3y, m\angle G = y + 50$

16. $CD = 2x + 3; HJ = 3x + 2$

17. $m\angle C = 5z + 20, m\angle H = 6z + 10$

18. $AD = 5b + 4; FJ = 3b + 8$

19. $LMNP \cong QRST$. Find the value of $x$.

20. **Given:** $BD$ is the angle bisector of $\angle ABC$.

   $BD$ is the perpendicular bisector of $AC$.

   **Prove:** $\triangle ADB \cong \triangle CBD$

   Because $BD$ is the angle bisector of $\angle ABC$, $\angle ABD \cong \angle CBD$.

   Because $BD$ is the perpendicular bisector of $AC$, $AD \cong CD$ and $\angle ADB \cong \angle CDB$. $BD \cong BD$ by the Reflexive Property of Congruence. So, because the corresponding parts are all congruent, $\triangle ABD \cong \triangle CBD$.

4
Each pair of polygons is congruent. Find the measures of the numbered angles.

1. \( \angle M \) and \( \angle Q \)
   - \( \angle 1 = 90^\circ \)
   - \( \angle 2 = 40^\circ \)

2. \( \angle A \) and \( \angle B \)
   - \( \angle 1 = 95^\circ \)
   - \( \angle 2 = 60^\circ \)

Use the diagram at the right for Exercises 3–7. \( \triangle ABC \cong \triangle XYZ \).

Complete the congruence statements.

3. \( \overline{AB} \cong \overline{XY} \)

   To start, use the congruence statement to identify the points that correspond to \( A \) and \( B \).

   \( A \) corresponds to \( X \). \( B \) corresponds to \( Y \).

4. \( \overline{ZY} \cong \overline{CB} \)

5. \( \angle Z \cong \angle C \)

6. \( \triangle BAC \cong \triangle YXZ \)

7. \( \angle B \cong \angle Y \)

**FOUR \cong MANY.** List each of the following.

8. four pairs of congruent angles \( \angle F \cong \angle M; \angle O \cong \angle A; \angle U \cong \angle N; \angle R \cong \angle Y \)

9. four pairs of congruent sides \( \overline{FO} \cong \overline{MA}; \overline{OU} \cong \overline{AN}; \overline{UR} \cong \overline{NY}; \overline{RF} \cong \overline{YM} \)

For Exercises 10 and 11, can you conclude that the figures are congruent? Justify your answers.

10. \( \triangle SRT \) and \( \triangle PRQ \)

    No; \( \angle SRT \cong \angle PRQ \) because vert. \( \triangle \) are \( \cong \), and \( \angle RST \cong \angle RPQ \) by Third Angles Thm., but none of the sides are necessarily congruent.

11. \( \triangle ABC \) and \( \triangle FGH \)

    Yes; \( \angle BAC \cong \angle GFH \) by Third Angles Thm. Therefore, \( \triangle ABC \cong \triangle FGH \) by the def. of \( \cong \) triangles.
12. Given: \( AD \) and \( BE \) bisect each other.  
\( AB \approx DE; \angle A \approx \angle D \)

Prove: \( \triangle ACB \approx \triangle DCE \)

<table>

</table>

13. If \( \triangle ABC \approx \triangle JKL \), which of the following must be a correct congruence statement?  
\( \triangle ABC \approx \triangle JKL \)

\( \triangle ABC \approx \triangle JKL \)

14. Reasoning  A student says she can use the information in the figure to prove \( \triangle ACB \approx \triangle ACD \). Is she correct? Explain.

No; explanations may vary. Sample: Corresponding parts are not congruent. The figure can be used to prove \( \triangle ACB \approx \triangle CAD \).

Algebra  Find the values of the variables.

15. \( \triangle XYZ \approx \triangle FED \)  
\( 3; 15 \)

16. \( \triangle ABD \approx \triangle CDB \)  
\( 15 \)

17. \( m \angle F = x + 24; m \angle Q = 3x \)  
\( 36; 36 \)

18. \( GH = 3x - 2; RS = x + 6 \)  
\( 10; 10 \)
Multiple Choice

For Exercises 1–6, choose the correct letter.

1. The pair of polygons at the right is congruent. What is $m \angle J$?
   - $A \ 45$
   - $B \ 90$
   - $C \ 135$
   - $D \ 145$

2. The triangles at the right are congruent. Which of the following statements must be true? $I$
   - $F \ \angle A \cong \angle D$
   - $H \ AB \cong DE$
   - $G \ \angle B \cong \angle E$
   - $I \ BC \cong FD$

3. Given the diagram at the right, which of the following must be true? $B$
   - $A \ \triangle XSF \cong \triangle XTG$
   - $C \ \triangle FXS \cong \triangle XGT$
   - $B \ \triangle SXF \cong \triangle GXT$
   - $D \ \triangle FXS \cong \triangle GXT$

4. If $\triangle RST \cong \triangle XYZ$, which of the following need not be true? $I$
   - $F \ \angle R \cong \angle X$
   - $G \ \angle T \cong \angle Z$
   - $H \ RT \cong XZ$
   - $I \ SR \cong YZ$

5. If $\triangle ABC \cong \triangle DEF$, $m \angle A = 50$, and $m \angle E = 30$, what is $m \angle C$? $C$
   - $A \ 30$
   - $B \ 50$
   - $C \ 100$
   - $D \ 120$

6. If $ABCD \cong QRST$, $m \angle A = x - 10$, and $m \angle Q = 2x - 30$, what is $m \angle A$? $F$
   - $F \ 10$
   - $G \ 20$
   - $H \ 30$
   - $I \ 40$
   - $[2] \ \angle ABD \cong \angle CDB$ and $\angle ADB \cong \angle CBD$, both by the Alt. Int Angles Thm. So, by Third Angles Thm., $\angle A \cong \angle C$. Because $DB \cong BD$ by the Refl. Prop. of Congruence, and we know $AB \cong CD$ and $AD \cong CB$, then all the corresponding parts are congruent and $\triangle ABD \cong \triangle CDB$.

Short Response

7. Given: $AB \parallel DC$, $AD \parallel BC$, $AB \cong CD$, $AD \cong CB$
   Prove: $\triangle ABD \cong \triangle CDB$
Shared Implications

Sometimes different statements share one or more implications. For example, “$QR \perp ST$” and “$QR$ is the perpendicular bisector of $ST$” share the implication that $QR$ meets $ST$ at a right angle. The statements below refer to the diagram at the right.

1. $DJ \perp JK$;
2. $DJ \perp AD$;
3. $AD \parallel JK$;
4. $\angle A \equiv \angle K$;
5. $DX \equiv JX$;
6. $AD \equiv KJ$;
7. $AK$ bisects $DJ$;
8. $DJ$ bisects $AK$;
9. $m\angle D = m\angle J = 90$°

Identify shared implications and reduce the number of given statements.

1. What implication is shared by Statement 5 and Statement 7?
   Answers may vary. Sample: Both statements imply that $DX \equiv JX$.

2. What implication is shared by Statement 3 and Statement 4?
   Answers may vary. Sample: Both statements imply that $\angle A \equiv \angle K$.

3. Which two statements share at least one implication with Statement 9?
   Answers may vary. Sample: Statements 1 and 2

4. Can you prove $\triangle ADX \equiv \triangle KJX$ using only five of the statements above? If so, identify them, then complete the proof. Yes; Sample: statements 4, 6, 7, 8, and 9; $AK$ bisects $DJ$, so $DX \equiv JX$. $DJ$ bisects $AK$, so $AX \equiv KX$. $AD \equiv KJ$ is given, so all corresponding sides are congruent. $\angle AXD$ is congruent to $\angle KXJ$ by the Vert. Angles Thm. $m\angle D = m\angle J = 90$° and $\angle A \equiv \angle K$ are given, so all corresponding angles are congruent. So, $\triangle ADX \equiv \triangle KJX$.

5. Can you prove $\triangle ADX \equiv \triangle KJX$ using only four of the statements above? If so, identify them, then complete the proof. Yes; Sample: statements 6, 7, 8, and 3. $AK$ bisects $DJ$, so $DX \equiv JX$. $DJ$ bisects $AK$, so $AX \equiv KX$. $AD \equiv KJ$ is given, so all corresponding sides are congruent. $\angle AXD \equiv \angle KXJ$ by the Vert. Angles Thm. Because $AD \parallel JK$, $\angle D \equiv \angle J$, and $\angle A \equiv \angle K$, by the Alt. Int. Angles Thm., all corresponding angles are congruent. So, $\triangle ADX \equiv \triangle KJX$.

6. Can you prove $\triangle ADX \equiv \triangle KJX$ using only three of the statements above if the only way to prove triangles congruent is through the definition of congruent triangles? If so, identify them, then complete the proof. no
Given $ABCD \cong QRST$, find corresponding parts using the names. Order matters.

For example, $\overline{ABCD}$ This shows that $\angle A$ corresponds to $\angle Q$.
$\overline{QRST}$ Therefore, $\angle A \cong \angle Q$.

For example, $\overline{ABCD}$ This shows that $\overline{BC}$ corresponds to $\overline{RS}$.
$\overline{QRST}$ Therefore, $\overline{BC} \cong \overline{RS}$.

Exercises

Find corresponding parts using the order of the letters in the names.

1. Identify the remaining three pairs of corresponding angles and sides between $ABCD$ and $QRST$ using the circle technique shown above.
   $\angle B \cong \angle R$, $\angle C \cong \angle S$, $\angle D \cong \angle T$, $\overline{AB} \cong \overline{QR}$, $\overline{CD} \cong \overline{ST}$, and $\overline{DA} \cong \overline{TQ}$
   Angles: $ABCD$ $ABCD$ $ABCD$
   Sides: $ABCD$ $ABCD$ $ABCD$
   $QRST$ $QRST$ $QRST$
   $QRST$ $QRST$ $QRST$

2. Which pair of corresponding sides is hardest to identify using this technique?
   Answers may vary. Sample: $\overline{AD}$ and $\overline{QT}$

Find corresponding parts by redrawing figures.

3. The two congruent figures below at the left have been redrawn at the right.
   Why are the corresponding parts easier to identify in the drawing at the right?

   Answers may vary. Sample: The drawing at the right shows figures in same orientation.

4. Redraw the congruent polygons at the right in the same orientation. Identify all pairs of corresponding sides and angles. Check students’ work. $\angle A$ and $\angle P$, $\angle B$ and $\angle Q$, $\angle C$ and $\angle R$, $\angle D$ and $\angle S$, $\angle E$ and $\angle T$, $\overline{AB}$ and $\overline{PQ}$, $\overline{BC}$ and $\overline{QR}$, $\overline{CD}$ and $\overline{RS}$, $\overline{DE}$ and $\overline{ST}$, and $\overline{EA}$ and $\overline{TP}$ all correspond.

5. $MNOP \cong QRST$. Identify all pairs of congruent sides and angles.
   $\angle M \cong \angle Q$, $\angle N \cong \angle R$, $\angle O \cong \angle S$, $\angle P \cong \angle T$,
   $\overline{MN} \cong \overline{QR}$, $\overline{NO} \cong \overline{RS}$, $\overline{OP} \cong \overline{ST}$, and $\overline{PM} \cong \overline{TQ}$
Problem

Given $\triangle ABC \cong \triangle DEF$, $m\angle A = 30$, and $m\angle E = 65$, what is $m\angle C$?

How might you solve this problem? Sketch both triangles, and put all the information on both diagrams.

$m\angle A = 30$; therefore, $m\angle D = 30$. How do you know? Because $\angle A$ and $\angle D$ are corresponding parts of congruent triangles.

Exercises

Work through the exercises below to solve the problem above.

6. What angle in $\triangle ABC$ has the same measure as $\angle E$? What is the measure of that angle? Add the information to your sketch of $\triangle ABC$.
   $\angle B; 65$

7. You know the measures of two angles in $\triangle ABC$. How can you find the measure of the third angle?
   Answers may vary. Sample: Use Triangle Angle-Sum Thm. Set sum of all three angles equal to 180.

8. What is $m\angle C$? How did you find your answer?
   $85$; answers may vary. Sample: $m\angle C = 180 - (60 + 35)$

Before writing a proof, add the information implied by each given statement to your sketch. Then use your sketch to help you with Exercises 9–12.

Add the information implied by each given statement.

9. Given: $\angle A$ and $\angle C$ are right angles.
   $m\angle A = m\angle C = 90$, $\overline{DA} \perp \overline{AB}$ and $\overline{DC} \perp \overline{BC}$

10. Given: $\overline{AB} \cong \overline{CD}$ and $\overline{AD} \cong \overline{CB}$.
    $ABCD$ is a parallelogram because it has opposite sides that are congruent.

11. Given: $\angle ADB \cong \angle CBD$.
    $\overline{AD} \parallel \overline{BC}$

12. Can you conclude that $\angle ABD \cong \angle CDB$ using the given information above? If so, how?
    Yes; use the Third Angles Thm.

13. How can you conclude that the third side of both triangles is congruent?
    The third side is shared by both triangles and is congruent by the Refl. Prop. of Congruence.
Problem

Use the figure at the right. How can you prove that \( \triangle ABC \cong \triangle XYZ \)? Justify each step.

**Given:** The figure at the right

**Prove:** \( \triangle ABC \cong \triangle XYZ \)

1) \( \overline{AB} \cong \overline{XY} \)  \hspace{2cm} 1) Given
2) \( \overline{BC} \cong \overline{YZ} \)  \hspace{2cm} 2) Given
3) \( \angle A \cong \angle X \)  \hspace{2cm} 3) Given
4) \( \angle C \cong \angle Z \)  \hspace{2cm} 4) Given
5) \( \angle B \cong \angle Y \)  \hspace{2cm} 5) Third Angles Theorem
6) \( \triangle ABC \cong \triangle XYZ \)  \hspace{2cm} 6) Side-Angle-Side (SAS) Postulate

Exercises

1. Use the figure at the right. How can you prove that \( \triangle GMH \cong \triangle TMS \)? Justify each step.

**Given:** \( M \) is the midpoint of \( \overline{HS} \) and \( \overline{GT} \).

**Prove:** \( \triangle GMH \cong \triangle TMS \)

1) \( \overline{GM} \cong \overline{TM} \)  \hspace{2cm} 1) Definition of the midpoint
2) \( \overline{HM} \cong \overline{SM} \)  \hspace{2cm} 2) Definition of the midpoint
3) \( \angle GMH \cong \angle TMS \)  \hspace{2cm} 3) Vertical angles are congruent.
4) \( \triangle GMH \cong \triangle TMS \)  \hspace{2cm} 4) Side-Angle-Side (SAS) Postulate

2. Use the figure at the right. How can you prove that \( \triangle GHI \cong \triangle JHI \)? Justify each step.

**Given:** \( H \) is the midpoint of \( \overline{GJ} \).

**Prove:** \( \triangle GHI \cong \triangle JHI \)

1) \( \overline{GH} \cong \overline{JI} \)  \hspace{2cm} 1) Definition of the midpoint
2) \( \overline{HI} \cong \overline{II} \)  \hspace{2cm} 2) Reflexive Property of \( \cong \)
3) \( \overline{GI} \cong \overline{JI} \)  \hspace{2cm} 3) Third Side Postulate
4) \( \triangle GHI \cong \triangle JHI \)  \hspace{2cm} 4) Side-Side Side (SSS) Postulate
4-2 Think About a Plan
Triangle Congruence by SSS and SAS

Use the Distance Formula to determine whether \( \triangle ABC \) and \( \triangle DEF \) are congruent. Justify your answer.

\[ \begin{align*}
A(1, 4), & B(5, 5), C(2, 2) \\
D(-5, 1), & E(-1, 0), F(-4, 3)
\end{align*} \]

Understanding the Problem

1. You need to determine if \( \triangle ABC \cong \triangle DEF \). What are the three ways you know to prove triangles congruent?
   
   If all corresponding parts are congruent, if all three sides are congruent, or, if two sides and the included angle are congruent, then the triangles are congruent.

2. What information is given in the problem?
   The coordinates for each vertex of each triangle

Planning the Solution

3. If you use the SSS Postulate to determine whether the triangles are congruent, what information do you need to find?
   
   The lengths of the three sides of each triangle

4. How can you find distances on a coordinate plane without measuring?
   
   Use the Distance Formula.

5. In an ordered pair, which number is the \( x \)-coordinate? Which is the \( y \)-coordinate?
   
   The \( x \)-coordinate is the first number and the \( y \)-coordinate is the second number.

Getting an Answer

6. Find the length of each segment using the Distance Formula,
   
   \[ D = \sqrt{(y_1 - y_2)^2 + (x_1 - x_2)^2} \]. Your answers may be in simplest radical form.

   \[ \begin{align*}
   AB & = \sqrt{17} \\
   BC & = 3\sqrt{2} \\
   CA & = \sqrt{5} \\
   DE & = \sqrt{17} \\
   EF & = 3\sqrt{2} \\
   FD & = \sqrt{5}
   \end{align*} \]

7. Using the SSS Postulate, are the triangles congruent? Explain.
   
   Yes; the triangles are congruent, because three pairs of sides are congruent.
4-2 Practice

Triangle Congruence by SSS and SAS

Draw $\triangle MGT$. Use the triangle to answer the questions below.

1. What angle is included between $\overline{GM}$ and $\overline{MT}$? $\angle M$
2. Which sides include $\angle T$? $\overline{GT}$ and $\overline{TM}$
3. What angle is included between $\overline{GT}$ and $\overline{MG}$? $\angle G$

Would you use SSS or SAS to prove the triangles congruent? If there is not enough information to prove the triangles congruent by SSS or SAS, write *not enough information*. Explain your answer.

4. Not enough information; two pairs of corresponding sides are congruent, but the congruent angle is not included.

5. SAS; two pairs of corresponding sides and their included angle are congruent.

6. SSS; three pairs of corresponding sides are congruent.

7. Not enough information; two pairs of corresponding sides are congruent, but the congruent angle is not the included angle.

8. SSS; three corresponding sides are congruent.

9. SAS; two pairs of corresponding sides and their included right angle are congruent.

10. Not enough information; one pair of corresponding sides and corresponding angles are congruent, but the other pair of corresponding sides that form the included angle must also be congruent.

11. SAS; two pairs of corresponding sides and their included vertical angles are congruent.

12. SSS or SAS; three pairs of corresponding sides are congruent, or, two pairs of corresponding sides and their included vertical angles are congruent.
13. **Draw a Diagram** A student draws $\triangle ABC$ and $\triangle QRS$. The following sides and angles are congruent:

$AC \cong QS$, $AB \cong QR$, $\angle B \cong \angle R$

Based on this, can the student use either SSS or SAS to prove that $\triangle ABC \cong \triangle QRS$? If the answer is no, explain what additional information the student needs. Use a sketch to help explain your answer.

No; $\angle B$ and $\angle R$ are not the included angles for the sides given. To prove congruence, you would need to know either that $BC \cong RS$ or $\angle Q \cong \angle A$.

14. **Given:** $BC \cong DC$, $AC \cong EC$
**Prove:** $\triangle ABC \cong \triangle EDC$

<table>
<thead>

16. **Error Analysis** $\triangle FGH$ and $\triangle PQR$ are both equilateral triangles. Your friend says this means they are congruent by the SSS Postulate. Is your friend correct? Explain. Incorrect; both triangles being equilateral means that the three angles and sides of each triangle are congruent, but there is no information comparing the side lengths of the two triangles.

17. A student is gluing same-sized toothpicks together to make triangles. She plans to use these triangles to make a model of a bridge. Will all the triangles be congruent? Explain your answer. Yes; because all the triangles are made from the same-sized toothpick, all three corresponding sides will be congruent.
1. **Developing Proof**  Copy and complete the flow proof.

   **Given:** \( RX \equiv SX, \ QX \equiv TX \)
   
   **Prove:** \( \triangle QXR \equiv \triangle TXS \)

   \[
   RX = SX \quad \text{and} \quad QX = TX
   \]

   \[
   \angle QXR = \angle TXS
   \]

   \[
   \angle QXR = \angle TXS
   \]

   \[
   ? = ?
   \]

   **SAS**

   What other information, if any, do you need to prove the two triangles congruent by SAS? Explain. To start, list the pairs of congruent, corresponding parts you already know.

2. \( AB \equiv HG \) and \( BC \equiv GF \)

   Need \( \angle B \equiv \angle G \); these are the included \( \triangle \).

3. \( XZ \equiv RT \) and \(ZY \equiv TS \) and

   \( \angle Y \equiv \angle S \)

   Need \( \angle Z \equiv \angle T \) or \( XY \equiv RS \)

Would you use SSS or SAS to prove these triangles congruent? If there is not enough information to prove the triangles congruent by SSS or SAS, write **not enough information**. Explain your answer.

4. **SSS**; third side is shared by both \( \triangle \) and is \( \equiv \) to itself by Refl. Prop. of \( \equiv \).

5. **SAS**; vertical \( \triangle \) are \( \equiv \).
Use the Distance Formula to determine whether \( \triangle FGH \) and \( \triangle JKL \) are congruent. Justify your answer.

6. \( F(0, 0), G(0, 4), H(3, 0) \) To start, find the lengths of the corresponding sides.
   \( J(1, 4), K(-3, 4), L(1, 1) \)
   \[ FG = \sqrt{(0 - 4)^2 + (0 - 0)^2} = 4 \]
   \[ JK = \sqrt{(4 - 4)^2 + (1 - 3)^2} = 4 \text{ Yes; they are } \cong \text{ by SSS.} \]
   \[ GH = 5 \quad KL = 5 \quad HF = 3 \quad LJ = 3 \]

7. \( F(-2, 5), G(4, -3), H(4, 3) \) No; they are not \( \cong \) because \( FH \) and \( JL \) have different lengths.
   \( J(2, 1), K(-6, 7), L(-6, 1) \)

Can you prove the triangles congruent? If so, write the congruence statement and name the postulate you would use. If not, write *not enough information* and tell what other information you would need.

8. \( \triangle QRS \cong \triangle YXW \) by SAS.

9. *not enough information; need \( FH \cong HK \) to apply SSS or \( \angle G \cong \angle J \) to apply SAS*

10. **Reasoning** Suppose \( \overline{AB} \cong \overline{DE} \), \( \angle B \cong \angle E \), and \( \overline{AB} \cong \overline{BC} \). Is \( \triangle ABC \) congruent to \( \triangle DEF \)? Explain. Not necessarily; \( EF \) may not be \( \cong \) to \( BC \).

11. **Given:** \( BD \) is the perpendicular bisector of \( AC \).
    **Prove:** \( \triangle BAD \cong \triangle BCD \)

<table>

Multiple Choice

For Exercises 1–4, choose the correct letter.

1. Which pair of triangles can be proved congruent by SSS?  
   - A
   - B
   - C
   - D

   ![Diagram A]
   ![Diagram B]
   ![Diagram C]
   ![Diagram D]

   1. Which pair of triangles can be proved congruent by SAS?  
   - F
   - G
   - H
   - I

   ![Diagram F]
   ![Diagram G]
   ![Diagram H]
   ![Diagram I]

3. What additional information do you need to prove \( \triangle NOP \cong \triangle QSR \)?  
   - A \( \overline{PN} = \overline{SQ} \)
   - B \( \overline{NO} = \overline{QR} \)
   - C \( \angle P = \angle S \)
   - D \( \angle O = \angle S \)

   ![Diagram A]
   ![Diagram B]
   ![Diagram C]
   ![Diagram D]

4. What additional information do you need to prove \( \triangle GHI \cong \triangle DEF \)?  
   - F \( \overline{HI} = \overline{EF} \)
   - H \( \angle F = \angle G \)
   - G \( \overline{HI} = \overline{ED} \)
   - I \( \overline{GI} = \overline{DF} \)

</tbody>
</table>
You can prove that triangles are congruent using the two postulates below.

**Postulate 4-1: Side-Side-Side (SSS) Postulate**

If all three sides of a triangle are congruent to all three sides of another triangle, then those two triangles are congruent.

If \( JK \equiv XY \), \( KL \equiv YZ \), and \( JL \equiv XZ \), then \( \triangle JKL \equiv \triangle XYZ \).

In a triangle, the angle formed by any two sides is called the *included angle* for those sides.

**Postulate 4-2: Side-Angle-Side (SAS) Postulate**

If two sides and the included angle of a triangle are congruent to two sides and the included angle of another triangle, then those two triangles are congruent.

If \( PQ \equiv DE \), \( PR \equiv DF \), and \( \angle P \equiv \angle D \), then \( \triangle PQR \equiv \triangle DEF \).

\( \angle P \) is included by \( 
(PQ) \) and \( PR \). \( \angle D \) is included by \( 
(ED) \) and \( DF \).

**Exercises**

1. What other information do you need to prove \( \triangle TRF \equiv \triangle DFR \) by SAS? Explain. \( DF \equiv TR \); by the Reflexive Property of Congruence, \( RF \equiv FR \). It is given that \( \angle TRF \equiv \angle DFR \). These are the included angles for the corresponding congruent sides.

2. What other information do you need to prove \( \triangle ABC \equiv \triangle DEF \) by SAS? Explain. \( \angle B \equiv \angle E \); These are the included angles between the corresponding congruent sides.

3. **Developing Proof** Copy and complete the flow proof.

   **Given:** \( DA \equiv MA \), \( AJ \equiv AZ \)

   **Prove:** \( \triangle JDA \equiv \triangle ZMA \)

   \[ \begin{align*}
   \triangle JDA \equiv \triangle ZMA \\
   DA \equiv MA \\
   AJ \equiv AZ \end{align*} \]

   \[ \begin{align*}
   \angle JAD \equiv \angle ZAM \\
   \triangle JDA \equiv \triangle ZMA \\
   \angle JAD \equiv \angle ZAM \end{align*} \]

   Vertical \( \triangle \) are \( \equiv \).
Would you use SSS or SAS to prove the triangles congruent? If there is not enough information to prove the triangles congruent by SSS or SAS, write *not enough information.* Explain your answer.

4. Not enough information; two pairs of corresponding sides are congruent, but the congruent angles are not the included angles.

5. Not enough information; you need to know if \( GC \cong DY \).

6. Not enough information; only two pairs of corresponding sides are congruent. You need to know if \( AB \cong XY \) or \( \angle Z \cong \angle C \).

7. Given: \( PO \cong SO \), \( O \) is the midpoint of \( NT \).
Prove: \( \triangle NOP \cong \triangle TOS \)

Statements: 1) \( PO \cong SO \); 2) \( O \) is the midpoint of \( NT \); 3) \( NO \cong TO \); 4) \( \angle NOP \cong \angle TOS \); 5) \( \triangle NOP \cong \triangle TOS \);
Reasons: 1) Given; 2) Given; 3) Def. of midpoint; 4) Vert. \( \triangle \) are \( \cong \); 5) SAS

8. Given: \( HI \cong HG \), \( FH \perp GI \)
Prove: \( \triangle FHI \cong \triangle FHG \)

Statements: 1) \( FH \cong FH \); 2) \( HI \cong HG \), \( FH \perp GI \); 3) \( \angle FHG \) and \( \angle FHI \) are rt. \( \triangle \); 4) \( \angle FHG \cong \angle FHI \); 5) \( \triangle FHI \cong \triangle FHG \);
Reasons: 1) Refl. Prop.; 2) Given; 3) Def. of perpendicular; 4) All rt. \( \triangle \) are \( \cong \); 5) SAS

9. A carpenter is building a support for a bird feeder. He wants the triangles on either side of the vertical post to be congruent. He measures and finds that \( AB \cong DE \) and that \( AC \cong DF \). What would he need to measure to prove that the triangles are congruent using SAS? What would he need to measure to prove that they are congruent using SSS?
For SAS, he would need to determine if \( \angle BAC \cong \angle EDF \); for SSS, he would need to determine if \( BC \cong EF \).

10. An artist is drawing two triangles. She draws each so that two sides are 4 in. and 5 in. long and an angle is 55\(^\circ\). Are her triangles congruent? Explain.
Answers may vary. Sample: Maybe; if both the 55\(^\circ\) angles are between the 4-in. and 5-in. sides, then the triangles are congruent by SAS.

Think About a Plan
Triangle Congruence by ASA and AAS

Given: \( \overline{AB} \parallel \overline{CD}, \overline{AD} \parallel \overline{CB} \)
Prove: \( \triangle ABC \cong \triangle CDA \)

1. What do you need to find to solve the problem?
   Sample: at least three corresponding pairs of sides or angles that I can prove to be congruent

2. What are the corresponding parts of the two triangles?
   \( \angle CAB \) and \( \angle ACD; \angle D \) and \( \angle B; \angle DAC \) and \( \angle BCA; \overline{AC} \) and \( \overline{CA}; \overline{AB} \) and \( \overline{CD}; \)
   and \( \overline{BC} \) and \( \overline{DA} \)

3. What word would you use to describe \( \overline{AC} \)? transversal

4. What can you show about angles in the triangles that can indicate congruency?
   I can find congruent angles using alternate interior angles of the transversal \( \overline{AC} \).

5. What do you know about a side or sides of the triangles that can be used to show congruency?
   The transversal is part of both triangles, so it is congruent to itself by the Reflexive Property of Congruence.

6. Write a proof in paragraph form.
   Answers may vary. Sample: \( \overline{AB} \parallel \overline{DC} \) and \( \overline{AD} \parallel \overline{BC} \) are given. Therefore \( \overline{AC} \) is a transversal. \( \angle CAB \cong \angle ACD \) and \( \angle DAC \cong \angle BCA \) by the Alternate Interior Angles Theorem. The transversal is part of both triangles, so \( \overline{AC} \cong \overline{CA} \) by the Reflexive Property of Congruence. \( \triangle ABC \cong \triangle CDA \) by the ASA Postulate.
Name two triangles that are congruent by ASA.

1. \( \triangle HIJ \cong \triangle MLK \)

2. \( \triangle RST \cong \triangle YXZ \)

3. **Developing Proof** Complete the proof by filling in the blanks.

   **Given:** \( \angle HIJ \cong \angle KIJ \)
   \( \angle IJH \cong \angle IJK \)

   **Prove:** \( \triangle HIJ \cong \triangle KIJ \)

   **Proof:** \( \angle HIJ \cong \angle KIJ \) and \( \angle IJH \cong \angle IJK \) are given.
   \( \overline{IJ} \cong \overline{IJ} \) by __. **Ref. Prop. of Congruence**
   So, \( \triangle HIJ \cong \triangle KIJ \) by __. **ASA**

4. **Given:** \( \angle LOM \cong \angle NPM, \overline{LM} \cong \overline{NM} \)

   **Prove:** \( \triangle LOM \cong \triangle NPM \)

   **Proof:** \( \angle LOM \cong \angle NPM \) and \( \overline{LM} \cong \overline{NM} \) are given.
   \( \angle LMO \cong \angle NMP \) because vert. \( \triangle \) are \( \cong \). So,
   \( \triangle LOM \cong \triangle NPM \) by **AAS**.

5. **Given:** \( \angle B \) and \( \angle D \) are right angles.

   \( \overline{AE} \) bisects \( \overline{BD} \)

   **Prove:** \( \triangle ABC \cong \triangle EDC \)

   **Statements** | **Reasons**
   --- | ---
   1) \( \angle B \) and \( \angle D \) are right angles. | 1) **Given**
   2) \( \angle B \cong \angle D \) | 2) **All right angles are congruent.**
   3) \( \angle BCA \cong \angle DCE \) | 3) **Vertical angles are congruent.**
   4) \( \overline{AE} \) bisects \( \overline{BD} \) | 4) **Given**
   5) \( \overline{BC} \cong \overline{CD} \) | 5) **Def. of bisector**
   6) \( \triangle ABC \cong \triangle EDC \) | 6) **ASA**
6. Developing Proof: Complete the proof.

Given: \( \angle 1 \cong \angle 2, AB \perp BL, KL \perp BL, AB \cong KL \)

Prove: \( \triangle ABG \cong \triangle KLG \)

Proof:

\[ \begin{align*}
AB \perp BL & \quad \text{a. Given} \\
\angle B \text{ is a right } \angle. & \quad \text{c. } \perp \text{ lines form right } \angle.
\end{align*} \]

\[ \begin{align*}
KL \perp BL & \quad \text{b. Given} \\
\angle L \text{ is a right } \angle. & \quad \text{d. } \perp \text{ lines form right } \angle.
\end{align*} \]

\[ \begin{align*}
\angle 1 \cong \angle 2 & \quad \text{e. Given} \\
\angle B \cong \angle L & \quad \text{f. all right } \angle \text{ are } \cong.
\end{align*} \]

\[ \begin{align*}
AB \cong KL & \quad \text{g. Given} \\
\triangle ABG \cong \triangle KLG & \quad \text{h. AAS}
\end{align*} \]

7. Write a flow proof.

Given: \( \angle E \cong \angle H \)

\( \angle HFG \cong \angle EGF \)

Prove: \( \triangle EGF \cong \triangle HFG \)

\[ \begin{align*}
\angle E \cong \angle H & \quad \text{Given} \\
\angle HFG \cong \angle EGF & \quad \text{Given} \\
FG \cong GF & \quad \text{Reflexive Prop. of } =
\end{align*} \]

\( \triangle EGF \cong \triangle HFG \)

AAS Theorem

8. Write a two-column proof.

Given: \( \angle K \cong \angle M \)

\( KL \cong ML \)

Prove: \( \triangle JKL \cong \triangle PML \)

\[ \begin{array}{c|c}
\text{Statements} & \text{Reasons} \\
\hline
\angle K \cong \angle M & \text{Given} \\
KL \cong ML & \text{Given} \\
\angle JKL \cong \angle PML & \text{Vert. } \angle \text{ are } \cong. \\
\triangle JKL \cong \triangle PML & \text{ASA Postulate}
\end{array} \]

For Exercises 9 and 10, write a paragraph proof.

9. Given: \( \angle D \cong \angle G \)

\( HE \cong FE \)

Prove: \( \triangle EFG \cong \triangle EHD \)

\( \angle D \cong \angle G \) is given. \( \angle DEH \cong \angle GEF \) because vert. \( \angle \) are \( \cong. \) \( HE \cong FE \) is given. So, \( \triangle EFG \cong \triangle EHD \) by AAS.

10. Given: \( JM \) bisects \( \angle J \).

\( JM \perp KL \)

Prove: \( \triangle JMK \cong \triangle JML \)

\( JM \) bisects \( \angle J \) is given. \( \angle KJM \cong \angle LJM \) by def. of an \( \angle \) bisector. \( JM \cong JM \) by the Refl. Prop. of \( =. \) \( JM \perp KL \) is given. \( \angle LMJ \) and \( \angle KMJ \) are right \( \angle \) by the def. of perpendicular. Therefore, \( \angle LMJ \cong \angle KMJ \) because all right \( \angle \) are \( \cong. \) So, \( \triangle JMK \cong \triangle JML \) by ASA.
4-3 Practice
Triangle Congruence by ASA and AAS

Name the two triangles that are congruent by ASA.

1. \( \triangle RQS \cong \triangle TUV \)
2. \( \triangle ABC \cong \triangle JKL \)
3. \( \triangle GHI \cong \triangle MNP \cong \triangle OQR \)

4. Developing Proof  Complete the two-column proof by filling in the blanks.

Given: \( BD \perp AC, BD \) bisects \( \angle ABC \)
Prove: \( \triangle ABD \cong \triangle CBD \)

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>

8. Reasoning A student tells you that he can prove the AAS Theorem using the SAS Postulate and the Third Angles Theorem. Do you agree with him? Explain. 
(Hint: How many pairs of sides does the SAS Postulate use?)

No; answers may vary. Sample: the SAS Postulate requires two pairs of corresp. \( \cong \) sides.

9. Reasoning Can you prove the triangles congruent? 
Justify your answer.

No; answers may vary. Sample. there are no included sides or included \( \triangle \) that correspond in both \( \triangle \), and you cannot use the Third Angles Theorem.
Multiple Choice

For Exercises 1–4, choose the correct letter.

1. Which pair of triangles can be proven congruent by the ASA Postulate?  
   [A]  
   [B]  
   [C]  
   [D]

   2. For the ASA Postulate to apply, which side of the triangle must be known?  
      [A] the included side  
      [B] the shortest side  
      [C] the longest side  
      [D] a non-included side

3. Which pair of triangles can be proven congruent by the AAS Theorem?  
   [A]  
   [B]  
   [C]  
   [D]

4. For the AAS Theorem to apply, which side of the triangle must be known?  
   [A] the included side  
   [B] the shortest side  
   [C] the longest side  
   [D] a non-included side

Short Response

5. Write a paragraph proof.
   Given: \( \angle 3 \cong \angle 5, \angle 2 \cong \angle 4 \)
   Prove: \( \triangle VWX \cong \triangle VYX \)

   [1] incomplete proof  
   [2] incorrect or no proof
**4-3 Enrichment**

Triangle Congruence by ASA and AAS

Follow these steps to create a stunt plane from a sheet of $8\frac{1}{2}$-in.-by-11-in. paper.

1. Fold the paper in half vertically. Using the definition of segment bisectors, note the congruent segments.  
   **Check students' work.**

2. Fold the upper corners to lie on either side of the center line. Using the definitions of angle bisectors and right angles, note the angles that are congruent.
   a. What theorem allows you to conclude that the two triangles you created are congruent? **ASA**
   b. Identify the congruent angles and sides.  **Check students' work.**

3. Fold the top point down along a line that is 1 in. below the bottom side of the triangles. Again, fold the upper corners to lie on either side of the center line.
   a. What theorem allows you to conclude that the two triangles you created are congruent? **ASA**
   b. Identify the congruent angles and sides.  **Check students' work.**

4. Fold the small triangle up along the line formed by the bottom sides of the triangles formed in Step 3. This exposes two more congruent triangles. The two triangles are congruent by ASA.
   a. Explain which angles are congruent and why.  **Check students' work.**
   b. Name the congruent sides, and explain how you know the sides are congruent.  **The included sides are congruent because the fold in Step 1 found the midpoint of the width of the paper, thus creating two equal segments.**

5. Fold along the vertical fold line formed in Step 1 so that the triangles formed in Step 4 are on the outside of the airplane.

6. Turn the paper so that the long edge is at the bottom. To complete the paper airplane, fold each top edge down to meet the bottom edge, and crease.

Follow the Steps to create a dart plane from a sheet of $8\frac{1}{2}$-in.-by-11-in. paper.

7. Repeat Steps 1 and 2 above.

8. Fold the upper side corners to lie on either side of the center line.  **Step 8**
   a. What theorem allows you to conclude that the two triangles you created are congruent? **ASA**
   b. Identify the congruent angles and sides.  **Check students' work.**

9. Turn the paper over. Fold the outer edges in so that they lie on either side of the center line.

10. Fold the paper in half along the original fold made in Step 7.

11. Adjust the wing flaps until they are at right angles with the body to complete the dart.
4-3 Reteaching
Triangle Congruence by ASA and AAS

Problem

Can the ASA Postulate or the AAS Theorem be applied directly to prove the triangles congruent?

a. Because \( \angle RDE \) and \( \angle ADE \) are right angles, they are congruent. \( ED \cong ED \) by the Reflexive Property of \( \cong \), and it is given that \( \angle R \cong \angle A \). Therefore, \( \triangle RDE \cong \triangle ADE \) by the AAS Theorem.

b. It is given that \( CH \cong FH \) and \( \angle F \cong \angle C \). Because \( \angle CHE \) and \( \angle FHB \) are vertical angles, they are congruent. Therefore, \( \triangle CHE \cong \triangle FHB \) by the ASA Postulate.

Exercises

Indicate congruences.

1. Copy the top figure at the right. Mark the figure with the angle congruence and side congruence symbols that you would need to prove the triangles congruent by the ASA Postulate.

2. Copy the second figure shown. Mark the figure with the angle congruence and side congruence symbols that you would need to prove the triangles congruent by the AAS Theorem.

3. Draw and mark two triangles that are congruent by either the ASA Postulate or the AAS Theorem. Check students’ work.

What additional information would you need to prove each pair of triangles congruent by the stated postulate or theorem?

4. ASA Postulate \( \angle ABD \cong \angle CBD \)

5. AAS Theorem \( \angle JMK \cong \angle LKM, \angle JKM \cong \angle LMK, \angle JMK \cong \angle LMK, \) or \( \angle JKM \cong \angle LKM \)

6. ASA Postulate \( \angle ZXY \cong \angle ZVU \)

7. AAS Theorem \( \angle Y \cong \angle O \)

8. AAS Theorem \( \angle P \cong \angle A \)

9. ASA Postulate \( \angle CYL \cong \angle ALY \)
10. Provide the reason for each step in the two-column proof.

**Given:** $TX \parallel VW, \overline{TU} \equiv \overline{VU}, \angle XTU \equiv \angle WVU,$

$\angle UWV$ is a right angle.

**Prove:** $\triangle TUX \equiv \triangle VUW$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>

<td>9) AAS Theorem</td>
</tr>
</tbody>
</table>

11. Write a paragraph proof.

**Given:** $WX \parallel ZY; WZ \parallel XY$

**Prove:** $\triangle WXY \equiv \triangle ZYW$

It is given that $WX \parallel ZY$ and $WZ \parallel XY$, so $\angle XWY \equiv \angle ZYW$ and $\angle XYW \equiv \angle ZYW$, by the Alternate Interior $\triangle$ Thm. $\angle WY \equiv \angle YW$ by the Reflexive Property of $\equiv$. So, by ASA Post. $\triangle WXY \equiv \triangle ZYW$.

12. Developing Proof Complete the proof by filling in the blanks.

**Given:** $\angle A \equiv \angle C, \angle 1 \equiv \angle 2$

**Prove:** $\triangle ABD \equiv \triangle CDB$

**Proof:** $\angle A \equiv \angle C$ and $\angle 1 \equiv \angle 2$ are given. $DB \equiv BD$ by $\_\_$. Refl. Prop. of Congruence

So, $\triangle ABD \equiv \triangle CDB$ by $\_\_$. AAS

13. Write a paragraph proof.

**Given:** $\angle 1 \equiv \angle 6, \angle 3 \equiv \angle 4, \overline{LP} \equiv \overline{OP}$

**Prove:** $\triangle LMP \equiv \triangle ONP$

$\angle 3 \equiv \angle 4$ is given. Therefore, $m \angle 3 = m \angle 4$, by def. of $\equiv \angle s$. Because $\angle 2$ and $\angle 3$ are linear pairs, and $\angle 4$ and $\angle 5$ are linear pairs, the pairs of angles are suppl. Therefore, $\angle 2 \equiv \angle 5$ by the Congruent Suppl. Thm. $\angle 1 \equiv \angle 6$ and $\overline{LP} \equiv \overline{OP}$ are given, so $\triangle LMP \equiv \triangle ONP$, by the AAS Thm.
There are two sets of note cards below that show how to prove \( BD \) is the perpendicular bisector of \( AE \). The set on the left has the statements and the set on the right has the reasons. Write the statements and the reasons in the correct order.

### Statements

1. \( \angle BAC \cong \angle DEC \)
2. \( AC \cong EC \)
3. \( \triangle ACB \cong \triangle ECD \)
4. \( BD \) is the perpendicular bisector of \( AE \).
5. \( BC \cong DC \); \( \angle ACB \) and \( \angle ECD \) are right angles; \( AB \parallel DE \)
6. \( \angle ACB \cong \angle ECD \)

### Reasons

1. Definition of the perpendicular bisector
2. Angle-Angle-Side (AAS) Theorem
3. When parallel lines are cut by a transversal, alternate interior angles are congruent.
4. Corresponding parts of congruent triangles are congruent.
5. Given
6. All right angles are congruent.

---

1) \( \overline{BC} \cong \overline{DC} \); \( \angle ACB \) and \( \angle ECD \) are right angles; \( AB \parallel DE \)
2) \( \angle ACB \cong \angle ECD \)
3) \( \angle BAC \cong \angle DEC \)
4) \( \triangle ACB \cong \triangle ECD \)
5) \( AC \cong EC \)
6) \( BD \) is the perpendicular bisector of \( AE \).
4-4 Think About a Plan
Using Corresponding Parts of Congruent Triangles

Constructions  The construction of $\angle B$ congruent to given $\angle A$ is shown. $\overline{AD} \cong \overline{BF}$ because they are the radii of the same circle. $\overline{DC} \cong \overline{FE}$ because both arcs have the same compass settings. Explain why you can conclude that $\angle A \cong \angle B$.

Understanding the Problem
1. What is the problem asking you to prove?
   $\angle A \cong \angle B$

2. Segments $\overline{DC}$ and $\overline{FE}$ are not drawn on the construction. Draw them in. What figures are formed by drawing these segments?
   two triangles

3. What information do you need to be able to use corresponding parts of congruent triangles?
   $\overline{AC}$ needs to be shown as congruent to $\overline{BE}$.

Planning the Solution
4. To use corresponding parts of congruent triangles, which two triangles do you need to show to be congruent?
   $\triangle ACD$ and $\triangle BEF$

5. What reason can you use to state that $\overline{AC} \cong \overline{BE}$?
   They are congruent because they are radii of the same circle by construction.

Getting an Answer
6. Write a paragraph proof that uses corresponding parts of congruent triangles to prove that $\angle A \cong \angle B$.
   $\overline{AC} \cong \overline{BE}$ and $\overline{AD} \cong \overline{BF}$ because they are both radii of the same circle. $\overline{DC} \cong \overline{FE}$ because they both have the same compass settings. Therefore, $\triangle ACD \cong \triangle BEF$ by SSS and $\angle A \cong \angle B$ by CPCTC.
For each pair of triangles, tell why the two triangles are congruent. Give the congruence statement. Then list all the other corresponding parts of the triangles that are congruent.

1. \( \triangle MKL \cong \triangle HKJ \)
   because vertical angles are congruent, so \( \triangle KJM \cong \triangle KLM \)
   by AAS. \( \angle KML \cong \angle KHJ, \quad MK \cong HK, \) and \( LR \cong JK. \)

2. \( PR \cong RP \)
   because the shared side of the two triangles is congruent to itself, so
   \( \triangle PRQ \cong \triangle RPN \)
   by SSS. \( \angle PRN \cong \angle RPQ, \quad \angle NPR \cong \angle QRP, \)
   and \( \angle RNP \cong \angle PQR. \)

3. Complete the proof.

   **Given:** \( \overline{YA} \cong \overline{BA}, \angle B \cong \angle Y \)
   **Prove:** \( \overline{AZ} \cong \overline{AC} \)

   **Statements**
   1) \( \overline{YA} \cong \overline{BA}, \angle B \cong \angle Y \)
   2) \( \angle YAZ \) and \( \angle BAC \) are vertical angles.
   3) \( \angle YAZ \cong \angle BAC \)
   4) \( \triangle AZY \cong \triangle ACB \)
   5) \( \overline{AZ} \cong \overline{AC} \)

   **Reasons**
   1) \(? \quad \text{Given} \)
   2) Definition of vertical angles
   3) \(? \quad \text{Vertical angles are congruent.} \)
   4) \(? \quad \text{ASA} \)
   5) \(? \quad \text{CPCTC} \)

4. **Open-Ended** Construct a figure that involves two congruent triangles. Set up given statements and write a proof that corresponding parts of the triangles are congruent. Check students’ work.
5. Complete the proof.

Given: \( BD \perp AB, BD \perp DE, BC \equiv DC \)

Prove: \( \angle A \equiv \angle E \)

<table>
<thead>
<tr>
<th>Statements</th>

</tbody>
</table>
1. **Developing Proof** State why the two triangles are congruent. Then list all other corresponding parts of the triangles that are congruent.

   $\triangle QRS \cong \triangle TWX; \angle Q \cong \angle T, RS \cong WX$

2. **Developing Proof** State why $\triangle AXY$ and $\triangle CYX$ are congruent. Then list all other corresponding parts of the triangles that are congruent.

   *Answers may vary. Sample: SAS; $\angle AYX \cong \angle CXY, \overline{AY} \cong \overline{CX}$*

3. **Given:** $\overline{QS} \parallel \overline{RT}, \angle R \cong \angle S$

   **Prove:** $\angle QTS \cong \angle TQR$

   To start, determine how you can prove the triangles are congruent. The triangles share a side and have a pair of congruent angles.

   Because $\overline{QS} \parallel \overline{RT}$, alternate interior angles $\angle SQT$ and $\angle RTQ$ are congruent. The triangles can be proven congruent by AAS.

   **Statements** | **Reasons**
   --- | ---
   1) $\overline{QS} \parallel \overline{RT}, \angle R \cong \angle S$ | 1) Given
   2) $\angle SQT \cong \angle RTQ$ | 2) Alternate interior $\triangle$ are $\cong$.
   3) $\overline{QT} \cong \overline{TQ}$ | 3) Reflexive Property of Congruence
   4) $\triangle STQ \cong \triangle RQT$ | 4) AAS
   5) $\angle QTS \cong \angle TQR$ | 5) Corresp. parts of $\cong \triangle$ are $\cong$.

   **Reasoning** Copy and mark the figure to show the given information. Explain how you would prove $\overline{AB} \cong \overline{DE}$.

   4. **Given:** $\overline{AC} \cong \overline{DC}, \angle B \cong \angle D$

      AAS and Corresp. parts of $\cong \triangle$ are $\cong$.

   5. **Given:** $\overline{AE}$ bisects $\overline{BD}$, $\overline{DB}$ bisects $\overline{AE}$

      SAS and Corresp. parts of $\cong \triangle$ are $\cong$.

   6. **Given:** $\overline{AB} \parallel \overline{DE}, AC = EC$

      *Answers may vary. Sample: AAS and Corresp. parts of $\cong \triangle$ are $\cong$.*
7. **Given:** \( \overline{GK} \) is the perpendicular bisector of \( \overline{FH} \).

Multiple Choice

For Exercises 1–6, choose the correct letter.

1. Based on the given information in the figure at the right, how can you justify that \( \triangle JHG \cong \triangle HJI \)?
   - A. ASA
   - B. SSS
   - C. AAS
   - D. ASA
   **B**

2. In the figure at the right the following is true: \( \angle ABD \cong \angle CDB \) and \( \angle DBC \cong \angle BDA \). How can you justify that \( \triangle ABD \cong \triangle CDB \)?
   - A. SAS
   - B. ASA
   - C. SSS
   - D. CPCTC
   **H**

3. \( \triangle BRM \cong \triangle KYZ \). How can you justify that \( YZ \parallel RM \)?
   - A. CPCTC
   - B. SAS
   - C. ASA
   - D. SSS
   **A**

4. Which statement cannot be justified given only that \( \triangle PBJ \cong \triangle TIM \)?
   - A. \( PB \parallel TI \)
   - B. \( \angle B \parallel \angle I \)
   - C. \( \angle BJP \parallel \angle IMT \)
   - D. \( BP \parallel IM \)
   **[1] one step missing or one reason incorrect [0] incorrect or no response**

5. In the figure at the right, which theorem or postulate can you use to prove \( \triangle ADM \cong \triangle ZMD \)?
   - A. ASA
   - B. SAS
   - C. SSS
   - D. AAS
   **C**

6. In the figure at the right, which theorem or postulate can you use to prove \( \triangle KGC \cong \triangle FHE \)?
   - A. ASA
   - B. SAS
   - C. SSS
   - D. AAS
   **H**

Short Response

7. What would a brief plan for the following proof look like?
   **Given:** \( AB \parallel DC \), \( \angle ABC \parallel \angle DCB \)
   **Prove:** \( AC \parallel DB \)
   \[ 2 \] \( CB \parallel BC \) by the Reflexive Property. \( \triangle CBD \cong \triangle BCA \) by SAS. \( \triangle ABC \cong \triangle DCB \) by CPCTC; [0] incorrect or no response
**4-4**  
**Enrichment**  
Using Corresponding Parts of Congruent Triangles

**String Art**

Artists have always used geometry, but in some cases geometry can become the driving force in art. In string art, for example, polygons combine to make interesting patterns. To make string art, you usually start with a frame with nails at equal intervals. The frame below left was used to make the art on the right. (The string wrapping around the nails has been omitted.)

Use the diagram and information below for Exercise 1.

**Given:** \( PQ = QR = RS = ST = TU = UV = VW = WX = XY = YZ \)

1. Find as many triangles as you can prove congruent in the above diagram. Name the postulate or theorem (SSS, SAS, ASA, or AAS) that justifies your answer. **Answers may vary. Sample:** \( \triangle TUZ \cong \triangle VUP \) (SAS); \( \triangle SUY \cong \triangle WUQ \) (SAS); \( \triangle QAP \cong \triangle YJZ \) (ASA); \( \triangle TJS \cong \triangle VAW \) (SSS)

Use the diagram and information below for Exercises 2 and 3.

**Given:** \( QF = RE, \overline{QF} \perp \overline{SV} \perp \overline{RE}, \overline{FE} \parallel \overline{GD} \)

2. Find three pairs of congruent triangles in the diagram. For each pair of triangles, name the postulate or theorem (SSS, SAS, ASA, or AAS) that justifies your answer. **Sample:** \( \triangle QWF \cong \triangle EWR \) (ASA); \( \triangle QFE \cong \triangle REF \) (SAS); \( \triangle FWE \cong \triangle FWQ \) (ASA)

3. If \( HC \parallel AB \parallel GD \) and \( HG \parallel AF \parallel CD \), find as many congruent triangles as you can in the diagram, and give an example for each type of triangle. **Sample:** 7 \( \triangle \) congruent to \( \triangle JUN \), 23 \( \triangle \) congruent to \( \triangle FWE \), 15 \( \triangle \) congruent to \( \triangle QFE \), and 7 \( \triangle \) congruent to \( \triangle ASD \)
If you can show that two triangles are congruent, then you can show that all the corresponding angles and sides of the triangles are congruent.

**Problem**

Given: \( \overline{AB} \parallel \overline{DC}, \angle B \cong \angle D \)

Prove: \( \overline{BC} \cong \overline{DA} \)

In this case you know that \( \overline{AB} \parallel \overline{DC} \). \( \overline{AC} \) forms a transversal and creates a pair of alternate interior angles, \( \angle BAC \cong \angle DCA \).

You have two pairs of congruent angles, \( \angle BAC \cong \angle DCA \) and \( \angle B \cong \angle D \). Because you know that the shared side is congruent to itself, you can use AAS to show that the triangles are congruent. Then use the fact that corresponding parts are congruent to show that \( \overline{BC} \cong \overline{DA} \).

Here is the proof:

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) ( \overline{AB} \parallel \overline{DC} )</td>
<td>1) Given</td>

4-5 Think About a Plan
Isosceles and Equilateral Triangles

Algebra  The length of the base of an isosceles triangle is \(x\). The length of a leg is \(2x - 5\). The perimeter of the triangle is 20. Find \(x\).

Know
1. What is the perimeter of a triangle?
   \[\text{the sum of the sides of a triangle}\]

2. What is an isosceles triangle?
   \[\text{a triangle with two sides the same length}\]

Need
3. What are the sides of an isosceles triangle called?
   \[\text{base and leg}\]

4. How many of each type of side are there?
   \[1 \text{ base and } 2 \text{ legs}\]

5. The lengths of the base and one leg are given. What is the third side of the triangle called?
   \[\text{leg}\]

Plan
6. Write an expression for the length of the third side. \(2x - 5\)

7. Write an equation for the perimeter of this isosceles triangle.
   \[x + (2x - 5) + (2x - 5) = 20\]

8. Solve the equation for \(x\). Show your work.
   \[5x - 10 = 20\]
   \[5x = 30\]
   \[x = 6\]
Complete each statement. Explain why it is true.

1. $\angle DBC \equiv ? \equiv \angle CDB$
   $\angle BCD$; all the angles of an equilateral triangle are congruent.

2. $\angle BDE \equiv ?$
   $\angle BDE$; the base angles of an isosceles triangle are congruent.

3. $\angle FED \equiv ? \equiv \angle DFE$
   $\angle EDF$; all the angles of an equilateral triangle are congruent.

4. $\overline{AB} \equiv ? \equiv \overline{BE}$
   $\overline{EA}$; all the sides of an equilateral triangle are congruent.

Algebra  Find the values of $x$ and $y$.

5. $65; 50$

6. $45; 90$

7. $(y - 10)\degree \quad 55; 70$

8. $30; 20$

9. $x = 110\degree \quad 70; 20$

10. $45; 45$

Use the properties of isosceles and equilateral triangles to find the measure of the indicated angle.

11. $m\angle ACB \quad 135$

12. $m\angle DBC \quad 20$

13. $m\angle ABC \quad 55$

14. Equilateral $\triangle ABC$ and isosceles $\triangle DBC$ share side $BC$. If $m\angle BDC = 34$ and $BD = BC$, what is the measure of $\angle ABD$? (Hint: it may help to draw the figure described.) $172$
4-5 Practice (continued) Form G

Isosceles and Equilateral Triangles

Use the diagram for Exercises 15–17 to complete each congruence statement. Explain why it is true.

15. $\overline{DF} \cong \ ?$ $\overline{DB}$; Converse of the Isosceles Triangle Theorem

16. $\overline{DG} \cong \ ?$ $\overline{DA}$; Converse of the Isosceles Triangle Theorem

17. $\overline{DC} \cong \ ?$ $\overline{DE}$; Converse of the Isosceles Triangle Theorem

18. The wall at the front entrance to the Rock and Roll Hall of Fame and Museum in Cleveland, Ohio, is an isosceles triangle. The triangle has a vertex angle of 102. What is the measure of the base angles? 39

19. Reasoning An exterior angle of an isosceles triangle has the measure 130. Find two possible sets of measures for the angles of the triangle.

50, 50, and 80; 50, 65, and 65

20. Open-Ended Draw a design that uses three equilateral triangles and two isosceles triangles. Label the vertices. List all the congruent sides and angles. Check students’ work.

Algebra Find the values of $m$ and $n$.

21. $45; 15$

22. $44; 68$

23. $67.5; 56.25$

24. Writing Explain how a corollary is related to a theorem. Use examples from this lesson in making your comparison.

A theorem is a statement that is proven true by a series of steps. A corollary is a statement that can be taken directly from the conclusion of a theorem, usually by applying the theorem to a specific situation. For example, Theorems 4-3 and 4-4 are general statements about all isosceles triangles. Their corollaries apply the theorems to equilateral triangles.
Complete each statement. Explain why it is true.

1. \( AB \equiv ? \)  
   \[ \text{Answers may vary. Sample: } \overline{AC}; \text{ the legs of an isosceles triangle are congruent.} \]

2. \( \angle BDE \equiv ? \)  
   \[ \text{Answers may vary. Sample: } \angle BED; \text{ the base angles of an isosceles triangle are congruent.} \]

3. \( \angle CBE \equiv ? \equiv \angle BCE \)  
   \[ \text{Answers may vary. Sample: } \angle BEC; \text{ all the angles of an equilateral triangle are congruent.} \]

Algebra Find the values of \( x \) and \( y \).

4. \( 90; 30 \)  
   \[ \text{To start, determine what types of triangles are shown in the diagram. Then use an equation to find } x. \]  
   Because two sides are marked congruent in both triangles, the triangles are both \( ? \). \text{ isosceles}  
   \[ 45 + 45 + x = 180 \]

5. \( 15; 120 \)  
6. \( 69; 37 \)

Use the properties of isosceles triangles to complete each statement.

7. If \( m \angle ADB = 54 \), then \( m \angle CBD = ? \). \( 72 \)

8. If \( AB = 8 \), then \( BD = ? \). \( 8 \)

9. You are asked to put a V-shaped roof on a house. The slope of the roof is \( 40^\circ \). What is the measure of the angle needed at the vertex of the roof? \( 100 \)

10. \textbf{Reasoning} \; The measure of one angle of a triangle is \( 30 \). Of the two remaining angles, the larger angle is four times the size of the smaller angle. Is the triangle isosceles? Explain. \; \textbf{Yes, because the measure of the smaller angle is 30.}
4-5 Practice (continued)  

Isosceles and Equilateral Triangles

For Exercises 11 and 12, use the diagram to complete each congruence statement. Then list the theorem or corollary that proves the statement. The first one has been done for you.

\[ \angle B \cong ? \]

Answer: \( \angle BAC \) (or \( \angle ACB \)); Corollary to Theorem 4-3

11. \( AD \cong ? \)

Answers may vary. Sample: \( \overline{AC} \) or \( \overline{DC} \); Corollary to Theorem 4-4

12. \( \angle E \cong ? \)

Answers may vary. Sample: \( \angle DCE \) or \( \angle CDE \); Corollary to Theorem 4-3

For Exercises 13–15, use the diagram to complete each congruence statement. Then list the theorem or corollary that proves the statement.

13. \( PR \cong ? \) \( QR \); Converse of the Isosceles Triangle Theorem

14. \( \angle RUV \cong ? \) \( \angle RVU \); Isosceles Triangle Theorem

15. \( SR \cong ? \) \( TR \); Converse of the Isosceles Triangle Theorem

16. Reasoning An equilateral triangle and an isosceles triangle share a common side as shown at the right. What is the measure of the vertex angle? Explain.

120; the congruent angles in the diagram both have a measure of 60. The base angles of the isosceles triangle have a measure of 30 because one is the other angle in a right triangle. The vertex angle must measure 120 if the base angles both measure 30.

Algebra Find the values of \( m \) and \( n \).

17. \( 25^\circ \) \( m^\circ \) \( 25^\circ \)

130; 105

18. \( n^\circ \)

67.5; 45
Gridded Response

Solve each exercise and enter your answer on the grid provided.

Refer to the diagram for Exercises 1–3.

1. What is the value of $x$?

2. What is the value of $y$?

3. What is the value of $z$?

4. The measures of two of the sides of an equilateral triangle are $3x + 15$ in. and $7x - 5$ in. What is the measure of the third side in inches?

5. In $\triangle GHI$, $HI = GH$, $m\angle IHG = 3x + 4$, and $m\angle IGH = 2x - 24$. What is $m\angle HIG$?

Answers

1. 55
2. 70
3. 55

19. \( m\angle FKH \) 41  
20. \( m\angle FHK \) 23  
21. \( m\angle KFH \) 116  
22. \( m\angle KHL \) 23  
23. \( m\angle HKL \) 41  
24. \( m\angle KLH \) 116  
25. \( m\angle HJM \) 80  
26. \( m\angle HMJ \) 80  
27. \( m\angle JHM \) 20  
28. \( m\angle OFK \) 82  
29. \( m\angle OKF \) 82  
30. \( m\angle KOF \) 16  
31. \( m\angle HKN \) 78.5  
32. \( m\angle HNK \) 78.5  
33. \( m\angle OKN \) 37.5  
34. \( m\angle JNO \) 40  
35. \( m\angle JON \) 40  
36. \( m\angle NJO \) 100
Two special types of triangles are isosceles triangles and equilateral triangles.

An isosceles triangle is a triangle with two congruent sides. The base angles of an isosceles triangle are also congruent. An altitude drawn from the shorter base splits an isosceles triangle into two congruent right triangles.

An equilateral triangle is a triangle that has three congruent sides and three congruent angles. Each angle measures $60^\circ$.

You can use the special properties of isosceles and equilateral triangles to find or prove different information about a given figure.

Look at the figure at the right.

You should be able to see that one of the triangles is equilateral and one is isosceles.

**Problem**

What is $m\angle A$?

$\triangle ABC$ is isosceles because it has two base angles that are congruent. Because the sum of the measures of the angles of a triangle is 180, and $m\angle B = 40$, you can solve to find $m\angle A$.

\[
\begin{align*}
   m\angle A + m\angle B + m\angle BEA &= 180 \\
   m\angle A + 40 + m\angle A &= 180 \\
   2m\angle A + 40 &= 180 \\
   2m\angle A &= 140 \\
   m\angle A &= 70
\end{align*}
\]

**Problem**

What is $FC$?

$\triangle CFG$ is equilateral because it has three congruent angles. $CG = (2 + 2) = 4$, and $CG = FG = FC$.

So, $FC = 4$. 
Problem

What is the value of $x$?

Because $x$ is the measure of an angle in an equilateral triangle, $x = 60$.

Problem

What is the value of $y$?

$$m\angle DCE + m\angle DEC + m\angle EDC = 180$$ There are $180^\circ$ in a triangle.

$$60 + 70 + y = 180$$ Substitution Property

$$y = 50$$ Subtraction Property of Equality

Exercises

Complete each statement. Explain why it is true.

1. $\angle EAB \equiv \angle EBA$; base angles of an isosceles triangle are congruent.
2. $\angle BCD \equiv \angle CDB$; the angles of an equilateral triangle are congruent.
3. $\overline{FG} \equiv \overline{GD}$; the sides of an equilateral triangle are congruent.

Determine the measure of the indicated angle.

4. $\angle ACB$ 60
5. $\angle DCE$ 65
6. $\angle BCD$ 55

Algebra Find the value of $x$ and $y$.

7. $\overline{y}$ 35; 35
8. $\overline{y}$ 65; 50

9. Reasoning An exterior angle of an isosceles triangle has a measure 140.
Find two possible sets of measures for the angles of the triangle. 40, 40, 100; 40, 70, 70

Think About a Plan

Congruence in Right Triangles

Algebra  For what values of $x$ and $y$ are the triangles congruent by HL?

Know

1. For two triangles to be congruent by the Hypotenuse-Leg Theorem, there must be a pair of right angles, and the lengths of the hypotenuses and one of the legs of each triangle must be equal.

2. The length of the hypotenuse of the triangle on the left is $3y + x$ and the hypotenuse of the triangle on the right is $y + 5$.

3. The length of the leg of the triangle on the left is $y - x$ and the length of the leg of the triangle on the right is $x + 5$.

Need

4. To solve the problem you need to find the values of $x$ and $y$.

Plan

5. What system of equations can you use to find the values of $x$ and $y$?

$$3y + x = y + 5; y - x = x + 5$$

6. What method(s) can you use to solve the system of equations?

Sample: Solve one equation for $y$ and substitute into the other equation; graph both equations.

7. What is the value of $y$? What is the value of $x$? 3; −1
1. **Developing Proof**  Complete the paragraph proof.

   **Given:** \( RT \perp SU, RU \cong RS \).
   **Prove:** \( \triangle RUT \cong \triangle RST \)

   **Proof:** It is given that \( RT \perp SU \). So, \( \angle RTS \) and \( \angle RTU \) are \( \text{right} \) angles because perpendicular lines form \( \text{right} \) angles. \( \overline{RT} \cong \overline{RT} \) by the Reflexive Property of Congruence. It is given that \( \overline{RU} \cong \overline{RS} \). So, \( \triangle RUT \cong \triangle RST \) by **HL**.

2. Look at Exercise 1. If \( m\angle RST = 46 \), what is \( m\angle RUT \)? \( 46 \)

3. Write a flow proof. Use the information from the diagram to prove that \( \triangle ABD \cong \triangle CDB \).

   **Sketch:**
   
   - \( \angle A \) and \( \angle C \) are \( \text{right} \) angles. **Given**
   - \( AB \cong CD \) **Given**
   - \( BD \cong DB \) Reflexive Property of Congruence
   - \( \triangle ABD \) and \( \triangle CDB \) are \( \text{right} \) \( \triangle \). **Definition of \( \text{right} \) \( \triangle \)**
   - \( \triangle ABD \cong \triangle CBD \) **HL Theorem**

4. Look at Exercise 3. Can you prove that \( \triangle ABD \cong \triangle CDB \) without using the Hypotenuse-Leg Theorem? Explain. Yes; answers may vary. Sample: You know that \( AB \cong CD \) from the diagram and \( DB \cong BD \) by the Reflexive Property of Congruence. Because the triangles are right triangles, the sides are related by the Pythagorean Theorem. If we let the legs \( = x \) and the hypotenuses \( = y \), then the length of the other leg will be \( \sqrt{y^2 - x^2} \) on both triangles. So, by SSS \( \triangle ABD \cong \triangle CDB \).

   Construct a triangle congruent to each triangle by the Hypotenuse-Leg Theorem.

5.

\end{align*} \]

10. \[ \begin{align*}
\triangle ABC & \cong \triangle DEF \\
\angle A & = \angle D \\
AC & = BD
\end{align*} \]

11. Write a paragraph proof.

   **Given:** \( \overline{AD} \) bisects \( \overline{EB} \), \( AB \cong DE \), \( \angle ECD \), \( \angle ACB \) are right angles.

   **Prove:** \( \triangle ACB \cong \triangle DCE \) \( \triangle ACB \) and \( \triangle DCE \) are right triangles because each contains a right angle (definition of a right triangle).

   It is given that \( AB \cong DE \), so the hypotenuses of these right triangles are congruent. Because \( \overline{AD} \) bisects \( \overline{EB} \), point \( C \) is the midpoint of \( \overline{EB} \). \( \overline{EC} \cong \overline{BC} \) (definition of a midpoint), so the triangles have a pair of congruent legs. By HL, \( \triangle ACB \cong \triangle DCE \).

   What additional information would prove each pair of triangles congruent by the Hypotenuse-Leg Theorem?

12. \[ \begin{align*}
\angle A & = \angle Q \\

</tbody>
</table>

2. Look at Exercise 1. If \( m\angle X = 54 \), what is \( m\angle Z \)? 54

3. Look at Exercise 1. If \( m\angle X = 54 \), what is \( m\angle VWZ \)? 36

4. Study Exercise 1. Can you prove that \( \triangle WVZ \) and \( \triangle VWX \) are congruent without using the HL Theorem? Explain.
   Yes; answers may vary. Sample: by using the Pythagorean Theorem to find another pair of congruent sides

**Algebra**  For what values of \( x \) and \( y \) are the triangles congruent by HL?

5. \[ x - 4, 2y, y + 3 \]
   \[ 14; 7 \]

6. \[ y + 5, y + x, x + 7 \]
   \[ 2; 7 \]

7. **Reasoning**  The LL Theorem says that two right triangles are congruent if both pairs of legs are congruent. What theorem or postulate could be used to prove that the LL Theorem is true? Explain.
   Answers may vary. Sample: The SAS Postulate could be used to prove the LL Theorem because the two right triangles would have two pairs of congruent legs and the included right angles would also be congruent.
What additional information would prove each pair of triangles congruent by the Hypotenuse-Leg Theorem?

8. \( AC = DF \)

9. \( \angle M \) and \( \angle S \) are right angles.

10. \( JL = MO \) or \( KL = NO \)

11. \( WZ = YX \) or \( WX = YZ \)

Coordinate Geometry Use the figure at the right for Exercises 12–14.

12. Complete the paragraph proof that shows that \( AC \) and \( CD \) are perpendicular.

The slope of \( AC \) is \(-2\). The slope of \( CD \) is \( 0.5 \).

The product of the two slopes is \(-1\). Therefore the line segments are \( ? \). perpendicular

13. How do you know that \( AB = CD \)?

The Distance Formula shows that both line segments have length \( 2\sqrt{5} \).

14. Complete the paragraph proof below that shows that \( \triangle ACD \cong \triangle DBA \).

\( \angle ACD \) is a \( ? \) from Exercise 12. You can also use the product of slopes to show that \( \angle ABD \) is a right angle. \( \triangle ACD \) and \( \triangle ABD \) share the same hypotenuse. You can use the \( ? \) to show that \( AB = CD \). Therefore, by the \( ? \), \( \triangle ACD \cong \triangle DBA \). Distance Formula

HL Theorem
Standardized Test Prep
Congruence in Right Triangles

Multiple Choice
For Exercises 1–4, choose the correct letter.

1. Which additional piece of information would allow you to prove that the triangles are congruent by the HL theorem? C
   \( A \tri F \angle DFE = 40 \)
   \( B \tri F \angle F = \angle ABC \)
   \( C \tri AB \cong DE \)
   \( D \tri AC \cong DF \)

2. For what values of \( x \) and \( y \) are the triangles shown congruent? F
   \( A \tri x = 1, y = 4 \)
   \( B \tri x = 2, y = 4 \)
   \( C \tri x = 4, y = 1 \)
   \( D \tri x = 1, y = 3 \)

3. Two triangles have two pairs of corresponding sides that are congruent. What else must be true for the triangles to be congruent by the HL Theorem? D
   \( A \tri The included angles must be right angles. \)
   \( B \tri They have one pair of congruent angles. \)
   \( C \tri Both triangles must be isosceles. \)
   \( D \tri There are right angles adjacent to just one pair of congruent sides. \)

4. Which of the following statements is true? H
   \( A \tri \triangle BAC \cong \triangle GHI \) by SAS.
   \( B \tri \triangle DEF \cong \triangle GHI \) by SAS.
   \( C \tri \triangle BAC \cong \triangle DEF \) by HL.
   \( D \tri \triangle DEF \cong \triangle GHI \) by HL.

Extended Response
5. Are the given triangles congruent by the HL Theorem? Explain.
   [4] No; they are right triangles, and have a pair of congruent legs \( \text{AB} \cong \text{BC} \), but the hypotenuses, \( \text{DB} \) and \( \text{DC} \), are not congruent. So, the triangles only meet two of the three conditions for congruence by the HL Theorem.
   [3] Appropriate response plus a discussion of two of the three criteria for congruence [2] recognition only that the hypotenuses are not congruent [1] recognition that the triangles are not congruent [0] incorrect or no response.
Right Triangle Patterns

An art student wants to make a painting with a simple geometric pattern. She starts with a square. She divides this square into two congruent triangles. Then she divides each of these triangles into two smaller congruent triangles. She repeats the process seven more times. What does her pattern look like in the end?

1. Show that the two triangles are congruent using the Hypotenuse-Leg Theorem.
   Sample: Each is a right triangle. They have at least one pair of congruent legs and they have congruent hypotenuses.

2. Use your knowledge of the Hypotenuse-Leg Theorem to divide each triangle in the figure above into two smaller congruent triangles. Repeat the process six more times. Check students’ work.

3. How do you know that the triangles at each step are congruent?
   Sample: Each is a right triangle, with equal legs and hypotenuses.

4. How many triangles of the smallest size are shown? 256

5. How many triangles are shown if they each contain 64 of the smallest-sized unit? 32

6. How many triangles are shown if they each contain nine of the smallest-sized unit? 168

7. Challenge Find the sizes of all 16 different-sized triangles in the diagram.
   1, 2, 4, 8, 9, 16, 18, 25, 32, 36, 49, 50, 64, 72, 98, 128

Two right triangles are congruent if they have congruent hypotenuses and if they have one pair of congruent legs. This is the Hypotenuse-Leg (HL) Theorem.

\( \triangle ABC \cong \triangle PQR \) because they are both right triangles, their hypotenuses are congruent \((AC \equiv PR)\), and one pair of legs is congruent \((BC \equiv QR)\).

**Problem**

How can you prove that two right triangles that have one pair of congruent legs and congruent hypotenuses are congruent (The Hypotenuse-Leg Theorem)?

Both of the triangles are right triangles.

\( \angle B \) and \( \angle E \) are right angles.

\( AB \equiv DE \) and \( AC \equiv DF \).

How can you prove that \( \triangle ABC \cong \triangle DEF \)?

Look at \( \triangle DEF \). Draw a ray starting at \( F \) that passes through \( E \). Mark a point \( X \) so that \( EX = BC \). Then draw \( DX \) to create \( \triangle DEX \).

See that \( EX \equiv BC \). (You drew this.) \( \triangle DEX \cong \triangle ABC \). (All right angles are congruent.) \( DE \equiv AB \). (This was given.) So, by SAS, \( \triangle ABC \cong \triangle DEX \).

\( DX \equiv AC \) (by CPCTC) and \( AC \equiv DF \). (This was given.) So, by the Transitive Property of Congruence, \( DX \equiv DF \). Then, \( \triangle DEX \cong \triangle DEF \). (All right angles are congruent.) By the Isosceles Theorem, \( \angle X \equiv \angle F \). So, by AAS, \( \triangle DEX \cong \triangle DEF \).

Therefore, by the Transitive Property of Congruence, \( \triangle ABC \cong \triangle DEF \).

**Problem**

Are the given triangles congruent by the Hypotenuse-Leg Theorem? If so, write the triangle congruence statement.

\( \angle F \) and \( \angle H \) are both right angles, so the triangles are both right.

\( GI \equiv IG \) by the Reflexive Property and \( FI \equiv HG \) is given.

So, \( \triangle FIG \cong \triangle HGI \).
4-6 Reteaching (continued)
Congruence in Right Triangles

Exercises

Determine if the given triangles are congruent by the Hypotenuse-Leg Theorem. If so, write the triangle congruence statement.

1. \( \triangle TUV \neq \triangle LMN \) not congruent

2. \( \triangle RST \cong \triangle TZN \)

3. \( \triangle LMN \cong \triangle RVS \)

Measure the hypotenuse and length of the legs of the given triangles with a ruler to determine if the triangles are congruent. If so, write the triangle congruence statement.

5. \( \triangle ABC \cong \triangle CMA \)

6. \( \triangle EFG \cong \triangle HIL \)

7. Explain why \( \triangle LMN \cong \triangle OMN \). Use the Hypotenuse-Leg Theorem.

   Because \( \angle NML \) and \( \angle NMO \) are right angles, both triangles are right triangles. It is given that their hypotenuses are congruent. Because they share a leg, one pair of corresponding legs is congruent. All criteria are met for the triangles to be congruent by the Hypotenuse-Leg Theorem.

8. Visualize \( \triangle ABC \) and \( \triangle DEF \), where \( AB = EF \) and \( CA = FD \). What else must be true about these two triangles to prove that the triangles are congruent using the Hypotenuse-Leg Theorem? Write a congruence statement.

   \( \angle B \) and \( \angle E \) are right angles, or \( \angle C \) and \( \angle D \) are right angles. \( \triangle ABC \cong \triangle DEF \) or \( \triangle ABC \cong \triangle FED \).
A student wanted to prove $\overline{EB} \cong \overline{DB}$ given $\angle AED \cong \angle CDE$ and $\overline{AE} \cong \overline{CD}$. She wrote the statements and reasons on note cards, but they got mixed up.

Use the note cards to write the steps in order.

1. First, $\angle AED \cong \angle CDE$ and $\overline{AE} \cong \overline{CD}$ are given.

2. Second, $\overline{ED} \cong \overline{DE}$ by the Reflexive Property of Congruence.

3. Third, $\triangle AED \cong \triangle CDE$ by the Side-Angle-Side (SAS) Theorem.

4. Next, $\angle A \cong \angle C$ because corresponding parts of congruent triangles are congruent.

5. Then, $\angle ABE \cong \angle CBD$ because vertical angles are congruent.

6. Then, $\triangle ABE \cong \triangle CBD$ by the Angle-Angle-Side (AAS) Theorem.

7. Finally, $\overline{EB} \cong \overline{DB}$ because corresponding parts of congruent triangles are congruent.
Think About a Plan

Congruence in Overlapping Triangles

Given: \( QT \perp PR, \overline{QT} \) bisects \( PR \), \( QT \) bisects \( \angle VQS \)

Prove: \( VQ \equiv SQ \)

Know

1. What information are you given? What else can you determine from the given information and the diagram?

\( QT \perp PR, QT \) bisects \( PR, QT \) bisects \( \angle VQS; \angle PQT \) and \( \angle RQT \) are right angles, \( PQ = QR, \angle VQT \equiv \angle SQT \)

2. To solve the problem, what will you need to prove?

\( VQ \equiv SQ \)

Need

3. For which two triangles are \( VQ \) and \( SQ \) corresponding parts?

\( \triangle PVQ \) and \( \triangle RSQ \) or \( \triangle VQT \) and \( \triangle SQT \)

4. You need to use corresponding parts to prove the triangles from Exercise 3 congruent. Which two triangles should you prove congruent first, using the given information? Which theorem or postulate should you use?

\( \triangle PQT \) and \( \triangle RQT \) by SAS

5. Which corresponding parts should you then use to prove that the triangles in Exercise 3 are congruent?

Answers may vary. Sample: \( \angle P \) and \( \angle R \)

Plan

6. Use the space below to write the proof.

Statements: 1) \( QT \perp PR; QT \) bisects \( PR, QT \) bisects \( \angle VQS \); 2) \( m\angle PQT = m\angle RQT = 90 \);
3) \( PQ = QR \); 4) \( QT = QT \); 5) \( \triangle PQT \equiv \triangle RQT \); 6) \( \angle P \equiv \angle R \); 7) \( \angle PQV \) and \( \angle VQT \) are compl. \( \angle RQS \) and \( \angle SQT \) are compl.; 8) \( \angle VQT \equiv \angle SQT \); 9) \( \angle PQV \equiv \angle RQS \); 10) \( \triangle PQV \equiv \triangle RQS \); 11) \( VQ \equiv SQ \); Reasons: 1) Given; 2) Definition of perpendicular lines; 3) Definition of bisector; 4) Reflexive Property of Congruence; 5) SAS; 6) CPCTC; 7) Definition of complementary angles; 8) Definition of angle bisector; 9) Complements of \( \angle \) are \( \angle \); 10) ASA; 11) CPCTC
4-7 Practice

Congruence in Overlapping Triangles

For Exercises 1–6, separate and redraw the indicated triangles. Identify any common angles or sides.

1. \(\triangle ABC\) and \(\triangle DCB\)
2. \(\triangle EFG\) and \(\triangle HGF\)
3. \(\triangle JML\) and \(\triangle NKL\)
4. \(\triangle BYA\) and \(\triangle CXA\)
5. \(\triangle GEH\) and \(\triangle FEH\)
6. \(\triangle MPN\) and \(\triangle MOQ\)

In each diagram in Exercises 7–12 the given triangles are congruent. Identify their common side or angle.

7. \(\triangle ADC\) and \(\triangle BCD\)
8. \(\triangle KNJ\) and \(\triangle KML\)
9. \(\triangle UXV\) and \(\triangle VWU\)
10. \(\triangle QTR\) and \(\triangle SRT\)
11. \(\triangle EGH\) and \(\triangle EFG\)
12. \(\triangle YNI\) and \(\triangle YPZ\)

13. Open-Ended Draw a diagram of a pair of triangles that share a common angle and a common side.
   Answers may vary. Check students’ drawings. Sample:
14. Complete the following proof.

Given: $RU \equiv TS$, $\angle RUT$ and $\angle UTS$ are right angles, $V$ is the midpoint of $US$.

Prove: $\triangle RVU \cong \triangle TVS$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) $RU \equiv TS$, $\angle RUT$ and $\angle UTS$ are right angles, $V$ is the midpoint of $US$.</td>
<td>1) ? Given</td>
</tr>
<tr>
<td>2) $UT \equiv TU$</td>
<td>2) ? Refl. Prop. of $\equiv$</td>
</tr>
<tr>
<td>3) $\angle STR$ and $\angle RTU$ are complementary angles.</td>

<td>11) ? ASA</td>
</tr>
</tbody>
</table>

15. Write a paragraph proof.

Given: $P$ is the midpoint of $QN$, $\overline{MP} \perp \overline{QN}$

Prove: $\triangle MRQ \cong \triangle MRN$

Given that $P$ is the midpt. of $QN$, $QP \equiv NP$, $RP \equiv RP$ by the Refl. Prop. of $\equiv$. Given $\overline{MP} \perp \overline{QN}$, $\angle MPQ$ and $\angle MPN$ are rt. $\triangle$ by the def. of $\perp$ and $\triangle MPQ \equiv \triangle MPN$ because all rt $\triangle$ are $\equiv$. Therefore, $\triangle RPO \equiv \triangle RPN$ by SAS. Knowing CPCTC, $\overline{QR} \equiv \overline{NR}$ and $\angle QRP \equiv \angle NRP$. Because $\angle QRM$ and $\angle QRP$ are suppl. and $\angle NRM$ and $\angle NRP$ are also suppl., $\triangle QRM \equiv \triangle NRM$, because suppl. of $\triangle$ are $\equiv$. By the Refl. Prop. of $\equiv$, it also follows that $\overline{MR} \equiv \overline{MR}$.

Therefore, $\triangle MRQ \equiv \triangle MRN$ by SAS.

16. In the diagram at the right, $\angle A \equiv \angle C$, $\overline{AB} \equiv \overline{CE}$, and $\overline{DA} \equiv \overline{FC}$. Which two triangles are congruent by SAS? Explain.

$\triangle ABD \equiv \triangle CEF$; all necessary sides and angles given are congruent; or $\triangle AED \equiv \triangle CBF$; $\angle A \equiv \angle C$, $\overline{AB} \equiv \overline{CE}$, and $\overline{DA} \equiv \overline{FC}$ are given, and $\overline{EB} \equiv \overline{BE}$ by the Reflexive Property. So, $\overline{CB} \equiv \overline{AE}$ by segment addition, which gives $\triangle AED \equiv \triangle CBF$ by SAS.
In each diagram, the stated triangles are congruent. Identify their common side or angle.

1. $\triangle BAE \cong \triangle ABC \quad \overline{AB}$

2. $\triangle SUV \cong \triangle WUT \quad \angle U$

Separate and redraw the indicated triangles. Identify any common angles or sides.

3. $\triangle ACF$ and $\triangle AEB \quad \angle A$

To start, redraw each triangle separately.

4. $\triangle FJK$ and $\triangle HJK \quad \overline{JK}$

Complete the drawing to separate the triangles.

5. **Developing Proof** Complete the two-column proof.

*Given:* $m\angle FEH = m\angle GFE = 90$, $\overline{EH} \cong \overline{FG}$

*Prove:* $HF \cong \overline{EG}$

</tbody>
</table>

**Open-Ended** Draw the diagram described.

7. Draw a line segment on your paper. Then draw two overlapping, congruent triangles that share the segment as a common side. 

*Check students’ work.*

8. Draw two right triangles that share a common angle that is not a right angle. 

*Check students’ work.*

9. The pattern at the right has been designed for a square floor tile. Both \( \triangle ACF \) and \( \triangle DBG \) are \( 30^\circ-60^\circ-90^\circ \) right triangles. Write a paragraph proof to prove that \( \triangle FGE \) is an equilateral triangle. 

*Answers may vary. Sample: \( ADGF \) is a square, so \( m\angle AFG \neq m\angle ADF \neq 90 \). \( m\angle EFG \neq m\angle EGF \) because they are complements of \( 30^\circ \) angles; \( m\angle GEF \neq 60 \) by the \( \triangle \) Angle-Sum Thm., so \( \triangle FGE \) is equilateral by Thm. 4-3.*
Multiple Choice

For Exercises 1–5, choose the correct letter.

1. What is the common angle of \(\triangle PQT\) and \(\triangle RSQ\)?  
   \[\text{A} \quad \angle PQT \quad \text{E} \quad \angle SRQ \quad \text{B} \quad \angle SPT \quad \text{D} \quad \angle SUT\]

Use the following information for Exercises 2–5.

Given: \(\triangle ZWX \cong \triangle YXW\), \(ZW \parallel XY\).

Prove: \(\triangle ZWR \cong \triangle YRX\)

2. Which corresponding parts statement is needed to prove \(\triangle ZWR \cong \triangle YRX\)?  
   \[\text{H} \quad ZW = YX \quad \text{B} \quad ZW = YX\]

3. A classmate writes the statement \(\angle ZRW \cong \angle YRX\) to help prove the congruence of the triangles. What reason should the classmate give?  
   \[\text{D} \quad \text{A} \quad \text{B} \quad \text{C} \quad \text{D}\]

4. After using the congruence statements from Exercises 2 and 3, which statement can be used to prove the triangles congruent?  
   \[\text{F} \quad \angle Z \cong \angle Y \quad \text{F} \quad \angle Z \cong \angle Y \quad \text{H} \quad WX \cong WX \quad \text{H} \quad WX \cong WX\]

5. Which theorem or postulate will prove \(\triangle ZWR \cong \triangle YRX\)?  
   \[\text{D} \quad \text{A} \quad \text{B} \quad \text{C} \quad \text{D}\]

Short Response

6. In the diagram at the right, which two triangles should be proved congruent first to help prove \(\triangle ABF \cong \triangle EDF\)?  
   \[\text{[2] } \triangle ACD \text{ and } \triangle ECB \quad \text{[1] Correct } \triangle \text{ named but vertices do not correspond. } \text{[0] incorrect } \triangle \text{ named}\]
Many geometric figures and patterns involve congruent triangles. These figures are made by drawing overlapping congruent triangles or by drawing a figure and then drawing diagonals to create congruent triangles. These figures are used in items such as quilts, logos, stained glass windows, and architectural designs.

Use the figure at the right to complete Exercises 1–5.

1. Name a pair of congruent triangles in the figure.
   Sample: \( \triangle ABD \cong \triangle AEC \)

2. Separate and redraw the triangles named in Exercise 1.
   Identify any common angles or sides.
   common angle: \( \angle A \)

3. Name another pair of congruent triangles in the figure.
   Sample: \( \triangle DEC \cong \triangle CBD \)

4. Separate and redraw the triangles named in Exercise 3. Identify any common angles or sides.
   common side: \( \overline{DC} \)

5. What is the total number of triangles in the figure? 8

Use the figure at the right to complete Exercises 6–10.

6. Name a pair of congruent triangles in the figure.
   Sample: \( \triangle GNJ \cong \triangle KLM \)

7. Separate and redraw the triangles named in Exercise 6. Identify any common angles or sides.

8. Name another pair of congruent triangles in the figure.
   Sample: \( \triangle HIM \cong \triangle JIM \)

9. Separate and redraw the triangles named in Exercise 8. Identify any common angles or sides.
   common side: \( \overline{IM} \)

10. What is the total number of triangles in the figure? 4
Sometimes you can prove one pair of triangles congruent and then use corresponding parts of those triangles to prove another pair congruent. Often the triangles overlap.

**Problem**

Given: $AB \cong CB$, $AE \cong CD$, $\angle AED \cong \angle CDE$

Prove: $\triangle ABE \cong \triangle CBD$

Think about a plan for the proof. Examine the triangles you are trying to prove congruent. Two pairs of sides are congruent. If the included angles, $\angle A$ and $\angle C$, were congruent, then the triangles would be congruent by SAS.

If the overlapping triangles $\triangle AED$ and $\triangle CDE$ were congruent, then the angles would be congruent by corresponding parts. When triangles overlap, sometimes it is easier to visualize if you redraw the triangles separately.

Now use the plan to write a proof.

Given: $AB \cong CB$, $AE \cong CD$, $\angle AED \cong \angle CDE$

Prove: $\triangle ABE \cong \triangle CBD$

<table>
<thead>

Use the plan to write a two-column proof.

5. Given: $\angle PSR$ and $\angle PQR$ are right angles, $\angle QPR \cong \angle SRP$.
Prove: $\triangle STR \cong \triangle QTP$

Plan for Proof:
Prove $\triangle QPR \cong \triangle SRP$ by AAS. Then use CPCTC and vertical angles to prove $\triangle STR \cong \triangle QTP$ by AAS.
Chapter 4 Quiz 1
Lessons 4-1 through 4-3

Do you know HOW?

1. Two triangles have the following pairs of congruent sides: \( BD \cong FJ \), \( DG \cong JM \), and \( GB \cong MF \). Write the congruence statement for the two triangles.

\[ \triangle BDG \cong \triangle FJM \]

\( \triangle QRS \cong \triangle TUV \). Name the angle or side that corresponds to the given part.

2. \( \angle Q \) \[ \triangle Q \]
3. \( RS \cong UV \)
4. \( \angle S \) \[ \triangle S \]
5. \( QS \cong TV \)

State the postulate or theorem that can be used to prove the triangles congruent. If you cannot prove the triangles congruent, write not enough information.

6. \[ \triangle \]
7. \[ \triangle \]
8. \[ \triangle \]
9. \[ \triangle \]
10. \[ \triangle \]
11. \( \angle AXB \cong \angle CXD \) Vertical angles are congruent.
12. \( \triangle ABX \cong \triangle CDX \) ASA

Do you UNDERSTAND?

13. Given: \( \overline{LM} \cong \overline{NO} \); \( \angle LMO \cong \angle NOM \)

Prove: \( \triangle LMO \cong \triangle NOM \)

\[ \overline{LM} \cong \overline{NO} \], \( \angle LMO \cong \angle NOM \), given. \( \overline{OM} \cong \overline{MO} \), Reflexive Property of Congruence;
\[ \triangle LMO \cong \triangle NOM \], Side-Angle-Side Postulate

14. Reasoning Explain why it is not possible to have a Side-Side-Angle congruence postulate or theorem. Draw a picture if necessary.

A triangle can have two sides and a not included angle congruent to another triangle, but the “hinge effect” of one side makes it possible for two different triangles to result.
Chapter 4 Quiz 2
Lessons 4-4 through 4-7

Do you know HOW?

Explain how to use congruent triangles to prove each statement true.

1. \( \triangle OMN \cong \triangle MOP \) by SSS. \( \angle OMN \cong \angle MOP \) by CPCTC.

2. \( \triangle PSO \cong \triangle PRO \) by SAS. \( \overline{SP} \cong \overline{RP} \) by CPCTC.

\( \angle OMN \cong \angle MOP \)

Find the values of \( x \) and \( y \).

3. \( x = 50 \); \( y = 80 \)

4. \( 2x - 5 = 8 \); \( y + 3 = 50 \)

Name a pair of overlapping congruent triangles in each diagram. State whether the triangles are congruent by SSS, SAS, ASA, AAS, or HL.

5. \( \triangle ABE \cong \triangle ACD \) by ASA

6. \( \triangle ZXW \cong \triangle YWX \) by SAS

Do you UNDERSTAND?

7. Reasoning Complete the proof by filling in the missing statements and reasons.

Given: \( \overline{AE} \cong \overline{AD}, \angle B \cong \angle C \)

Prove: \( \overline{EB} \cong \overline{DC} \)

<table>

    $40; 15$

14. $\triangle CGI \cong \triangle MPR$. Name all of the pairs of corresponding congruent parts.

   $\angle C \cong \angle M; \angle G \cong \angle P; \angle I \cong \angle R; \overline{CG} \cong \overline{MP}; \overline{GI} \cong \overline{PR}; \overline{CI} \cong \overline{MR}$
Name a pair of overlapping congruent triangles in each diagram. State whether the triangles are congruent by SSS, SAS, ASA, AAS, or HL.

15. Given: $\overline{LM} \cong \overline{LK}$; $\overline{LN} \cong \overline{LJ}$

$\triangle LMJ \cong \triangle LKN$ by SAS

16. Given: $\angle ABC \cong \angle DCB$; $\angle DBC \cong \angle ACB$

$\triangle ABC \cong \triangle DCB$ by ASA

17. Given: $\angle E \cong \angle D \cong \angle DCF \cong \angle EFC$

$\triangle DCF \cong \triangle EFC$ by AAS

18. Given: $\overline{HI} \cong \overline{JG}$

$\triangle HIG \cong \triangle JGH$ by HL

**Do you UNDERSTAND?**

19. **Reasoning** Complete the following proof by providing the reason for each statement.

Given: $\angle 1 \cong \angle 2$; $WX \cong \overline{ZY}$

Prove: $\angle 3 \cong \angle 4$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) $\angle 1 \cong \angle 2$; $WX \cong \overline{ZY}$</td>
<td>1) ? Given</td>

<tr>
<td>3) $\triangle WXP \cong \triangle ZYP$</td>
<td>3) ? SAS</td>
</tr>
<tr>
<td>4) $\overline{XP} \cong \overline{YP}$</td>
<td>4) ? CPCTC</td>
</tr>
<tr>
<td>5) $\angle 3 \cong \angle 4$</td>
<td>5) ? Isosceles Triangle Theorem</td>
</tr>
</tbody>
</table>

20. **Reasoning** Write a proof for the following:

Given: $\overline{BD} \perp \overline{AC}$, $D$ is the midpoint of $\overline{AC}$.

Prove: $\overline{BC} \cong \overline{BA}$

$\overline{BD} \perp \overline{AC}$, $D$ is the midpoint of $\overline{AC}$ is given, so $\triangle BDC \cong \triangle BDA$ because perpendicular lines form congruent angles. Also, $\overline{AD} \cong \overline{CD}$ by definition of midpoint. $\overline{BD} \cong \overline{BD}$ by the Reflexive Property of $\cong$. So, $\triangle BAD \cong \triangle BCD$ by SAS and $\overline{BC} \cong \overline{BA}$ by CPCTC.
Chapter 4 Part A Test

Lessons 4-1 through 4-3

Do you know HOW?

Complete the following statements.

1. Given: \( \triangle FGH \cong \triangle WAX \)
   a. \( GH \cong ? \quad AX \)
   b. \( \angle W \cong ? \quad \angle F \)

2. Given: \( BIKE \cong PATH \)
   a. \( \angle T \cong ? \quad \angle K \)
   b. \( THPA \cong ? \quad KEBI \)

3. In \( \triangle HOT \) and \( \triangle SUN \), \( \angle O \cong \angle U \) and \( \angle T \cong \angle N \).
   a. What is the relationship between \( \angle S \) and \( \angle H? \quad \angle S \cong \angle H \)
   b. If \( m\angle O = 27 \) and \( m\angle T = 63 \), what is \( m\angle S? \quad 90 \)

4. In \( \triangle RUG \), name the angle that is included between the given sides.
   a. \( GR \) and \( RU \quad \angle R \)
   b. \( UG \) and \( GR \quad \angle G \)

5. In \( \triangle PAD \), the given angle is included between which two sides?
   a. \( \angle P \quad \overline{AP} \) and \( \overline{PD} \)
   b. \( \angle D \quad \overline{AD} \) and \( \overline{DP} \)

Use the diagram at the right. Tell why each statement is true.

6. \( m\angle ADB = 90 \) If two \( \angle \) are suppl., and one is a right \( \angle \), then both are right \( \angle \).

7. \( BD \cong BD \) Refl. Prop. of \( \cong \)

8. \( \triangle ADB \cong \triangle CDB \) \( \text{AAS} \)

9. \textbf{Constructions} Construct \( \triangle JKL \) congruent to \( \triangle FGH \) using SAS.
10. In $\triangle ABC$, which side is included between $\angle B$ and $\angle C$? $BC$

11. In $\triangle XYZ$, $YZ$ is included between which two angles? $\angle Y$ and $\angle Z$

State the postulate or theorem you can use to prove each pair of triangles congruent. If the triangles cannot be proven congruent, write not enough information.

12. not enough information

13. Answers may vary. Sample: AAS or ASA

Determine what other information you need to prove the two triangles congruent. Then write the congruence statement and name the postulate or theorem you would use.

14. Answers may vary. Sample: need $AD \cong CD$; $\triangle ADB \cong \triangle CDB$; SSS

15. Answers may vary. Sample: need $\angle Y \cong \angle X$; $\triangle UVY \cong \triangle WVX$; AAS

Do you UNDERSTAND?

16. **Reasoning** If two triangles are congruent, all their corresponding parts are congruent. Write the converse of this statement. Is the converse true? Explain. Converse: If all the corresponding parts of two triangles are congruent, the triangles must be congruent; yes; by SSS, AAS, ASA, or SAS.

17. **Reasoning** The Third Angles Theorem can be applied to triangles that are not congruent. Explain. Answers may vary. Sample: The sum of the measures of the angles of any triangle is 180.

18. **Error Analysis** Your classmate says the triangles at the right are not congruent by SSS. She explains that congruent sides do not correspond. Explain the error in her reasoning.

Answers may vary. Sample: The sides do correspond after flipping one of the triangles.
Chapter 4 Part B Test
Lessons 4-4 through 4-7

Do you know HOW?

State the postulate or theorem you can use to prove each pair of triangles congruent. If the triangles cannot be proven congruent, write not enough information.

1. \( A \) \( \triangle ABC \) SAS

2. \( G \) not enough information

3. What is \( m\angle X? \)
   a. \( Z \)
   b. \( Z \)

4. What is the value of \( x? \)
   a. \( x \)
   b. \( x \)

Write a congruence statement for each pair of triangles. If the triangles cannot be proven congruent, write not enough information.

5. \( \triangle ABD \cong \triangle CBD \)

6. \( \triangle XYZ \cong \triangle BCA \)
Chapter 4 Part B Test (continued)  
Lessons 4-4 through 4-7

Write a congruence statement for each pair of triangles. If the triangles cannot be proven congruent, write *not enough information*.

7. \( \triangle FGK \cong \triangle JGH \)

8. Not enough information

Identify any common angles or sides for the indicated triangles.

9. \( \triangle ADC \) and \( \triangle BDC \)  \( \overline{CD} \)

10. \( \triangle FHJ \) and \( \triangle GKJ \)  \( \angle J \)

Separate and redraw the indicated triangles.

11. 

12. 

Do you UNDERSTAND?

13. Error Analysis Your friend claims isosceles triangles are congruent if two corresponding sides are congruent. He explains there are only two different lengths of sides, so the third side must always be congruent. Explain the error in his reasoning.  
   Answers may vary. Sample: The \( \cong \) sides can be corresp. legs, in which case the \( \angle \) between them can be different.

14. Compare and Contrast How can you use the Isosceles Triangle Theorem to prove that all equilateral triangles are also equiangular?  
   Answers may vary. Sample: By using the Isosceles Triangle Thm. two times for two pairs of sides, you can show that all the \( \triangle \) of an equilateral \( \triangle \) are \( \cong \).
Performance Tasks

Chapter 4

Task 1

Draw and label three pairs of triangles to illustrate the Side-Side-Side, Angle-Side-Angle, and Side-Angle-Side Postulates. One pair of triangles should share a common side. The figures should provide enough information to prove that they are congruent. Write the congruence statements for each pair.

Check students’ work.

[4] Student draws three pairs of triangles, and labels each pair. One pair of triangles shares a common side, and the three pairs demonstrate SSS, ASA, and SAS, respectively.

[3] Student does three of the requirements above. [2] Student does two of the requirements above. [1] Student does one of the requirements above. [0] Student does none of the requirements above.

Task 2

A rhombus is a quadrilateral with four congruent sides.

Given: RSTQ is a quadrilateral, \( \angle SRT \cong \angle STR \cong \angle RTQ \cong \angle TRQ \).

Prove: RSTQ is a rhombus.

[4] \( \angle SRT \cong \angle STR \cong \angle RTQ \cong \angle TRQ \) is given and the shared side \( \overline{RT} \) is congruent to itself by the Refl. Prop. of Congruence. So, \( \triangle STR \cong \triangle RTQ \) by ASA. \( \triangle STR \) and \( \triangle RTQ \) are also both isosceles by the Converse of the Isosc. Triangle Thm., so \( \overline{ST} \cong \overline{TQ} \cong \overline{QR} \cong \overline{RS} \). So, this quadrilateral is a rhombus. [3] mostly complete proof [2] incomplete proof [1] proof missing many of the needed steps [0] incorrect or no proof
Task 3
You need to design a company logo. The requirements for the logo are as listed:

- The logo must include at least six triangles.
- Some of the triangles should overlap.
- Some of the triangles should share sides.
- One triangle needs to be isosceles.
- One triangle needs to be equilateral.
- At least two pairs of triangles should be congruent pairs.

Use a straightedge, compass, and protractor to aid in your design.

Label the vertices of the triangles and describe as many congruencies as you can (sides and angles).

Describe two pairs of congruent triangles in your design and justify how you know they are congruent. Include references to geometric theorems and postulates.

Check students’ work.
[4] Student’s logo includes at least six triangles, some of which overlap. Some of the triangles share sides. At least one is isosceles, and at least one is equilateral. At least two pairs of triangles are congruent. Student has listed all possible congruencies and proved that the two congruent triangles are congruent. [3] Student has a complete logo but has not labeled diagrams accurately or proven that the congruent triangles are congruent. [2] Student logos meet most but not all of the six requirements above. [1] Student has an incomplete logo. [0] Student gives incorrect or no response.
Cumulative Review
Chapters 1–4

Multiple Choice

Use the diagram for Exercises 1 and 2. Line \( \ell \) is parallel to line \( m \).

1. Which best describes \( \angle 1 \) and \( \angle 5 \)?
   - A: alternate interior angles
   - B: alternate exterior angles
   - C: corresponding angles
   - D: same-side exterior angles
   C

2. Which best describes \( \angle 6 \) and \( \angle 7 \)?
   - F: vertical angles
   - H: alternate exterior angles
   - G: corresponding angles
   - I: linear pair
   F

3. If an animal is a mammal, then it has fur. What is the conclusion of this conditional?
   - A: An animal is a mammal.
   - B: The animal has fur.
   - C: Mammals have fur.
   - D: Not all animals have fur.
   B

4. Two of what geometric figure are joined at a vertex to form an angle?
   - F: points
   - G: planes
   - H: rays
   - I: lines
   H

5. If \( WZ = 80 \), what is the value of \( y \)?
   \[
   \begin{align*}
   W & = 2y \\
   X & = 2y + 3 \\
   Y & = 3y + 7 \\
   Z & = 2y + 3
   \end{align*}
   \]
   - A: 8
   - B: 9
   - C: 10
   - D: 11
   C

6. If \( \triangle ABC \cong \triangle DEF \), which is a correct congruence statement?
   - F: \( \angle B \cong \angle D \)
   - G: \( AB \cong EF \)
   - H: \( CA \cong FD \)
   - I: \( \triangle A \cong \triangle C \)
   H

7. Which can be used to justify stating that \( \triangle FGH \cong \triangle JKL \)?
   - A: ASA
   - B: SAS
   - C: SSS
   - D: AAS
   B

8. Which postulate can be used to justify stating that \( \triangle LMN \cong \triangle PQR \)?
   - F: ASA
   - G: SAS
   - H: SSS
   - I: AAS
   F
Cumulative Review (continued)

Chapters 1–4

Short Response

9. What is the midpoint of a segment with endpoints at (−2, 2) and (5, 10)? *(1.5, 6)*

Use the figure at the right for Exercises 10–12.

10. Which reason could you use to prove \( AC \cong EC \)? *Segment Addition Postulate*

11. Which reason could you use to prove \( \angle C \cong \angle C \)? *Reflexive Property of Congruence*

12. Which reason could you use to prove \( \triangle ACD \cong \triangle ECB \)? *SAS*

13. What is the slope of a line that passes through (−3, 5) and (4, 3)? *−\( \frac{2}{7} \)*

14. What is the slope of a line that is perpendicular to the line that passes through (−2, −2) and (1, 3)? *−\( \frac{3}{5} \)*

Extended Response

15. Draw \( \triangle ABC \cong \triangle EFG \). Write all six congruence statements. *Check students’ work.*

[4] Student draws and labels two triangles that look reasonably congruent. Student lists all six congruencies correctly. [3] Student draws and labels two triangles but lists only four congruencies correctly. [2] Student draws and labels two triangles but lists only three congruencies correctly, OR student does not draw the triangles but lists all six congruencies correctly. [1] Student draws and labels two triangles but lists only two congruencies correctly, OR student does not draw the triangles but lists four of the congruencies correctly. [0] Student gives incorrect or no response.

16. The coordinates of rectangle \( HIJK \) are \( H(−4, 1), I(1, 1), J(1, −2), \) and \( K(−4, −2) \). The coordinates of rectangle \( LMNO \) are \( L(−1, 3), M(2, 3), N(2, −3), \) and \( O(−1, −3) \). Are these two rectangles congruent? Explain. If not, how could you change the coordinates of one of the rectangles to make them congruent?

[4] No; answers may vary. Sample: \( HIJK \) has sides of length 3 and 5 while \( LMNO \) has sides of length 3 and 6. Change the coordinates for \( N \) and \( O \) to \( M(2, 8), O(−1, 8) \). [3] Student finds that the rectangles are not congruent, gives good replacement values to make them congruent, but does not fully explain. [2] Student either gives good explanation for why rectangles are not congruent or tells how to make them congruent, but not both. [1] Student finds that the rectangles are not congruent. [0] Student response is incorrect or blank.
Chapter 4 Project Teacher Notes: Tri, Tri Again

About the Project
Students will explore how engineers use triangles to construct safe, strong, stable structures. Then they will apply these ideas to build their own bridges, using toothpicks or craft sticks.

Introducing the Project
- Ask students whether they have ever built towers using playing cards. Ask them how they placed the first cards and why.
- Have students make towers using playing cards.

Activity 1: Modeling
Students will discover that triangles are more stable or rigid than quadrilaterals. Discuss with students real-world examples in which triangles are used for stability, such as ironing boards, scaffolding, and frames of roofs.

Activity 2: Observing
If students cannot find any local structures with exposed frameworks, suggest that they look in books or on the Internet for pictures of architecture or construction.

Activity 3: Investigating
Have students work in groups, keeping a log of the different models they make in their attempt to find one that supports the weight of the geometry book. Have groups compare the successful models and discuss their similarities and differences.

Finishing the Project
You may wish to plan a project day on which students share their completed projects. Encourage students to explain their processes as well as their products. Ask students to share how they selected their final bridge design. Ask students to submit their best models for a bridge-breaking competition, an event to which you could invite parents and the community.
Chapter 4 Project: Tri, Tri Again

Beginning the Chapter Project

Have you ever wondered how bridges stay up? How do such frail-looking frameworks stretch through the air without falling? How can they withstand the twisting forces of hurricane winds and the rumbling weight of trucks and trains? Part of the answer lies in the natural strength of triangles.

In your project for this chapter, you will explore how engineers use triangles to construct safe, strong, stable structures. You then will have a chance to apply these ideas as you design and build your own bridge with toothpicks or craft sticks. You will see how a simple shape often can be the strongest one.

Activities

Activity 1: Modeling

Many structures have straight beams that meet at joints. You can use models to explore ways to strengthen joints.

- Cut seven cardboard strips approximately 6 in. by $\frac{1}{2}$ in. Make a square frame and a triangular frame. Staple across the joints as shown.

  ![Square and Triangular Frames]

- With your fingertips, hold each model flat on a desk or table, and try to change its shape. Which shape is more stable? triangle

- Cut another cardboard strip, and use it to form a brace for the square frame. Is it more rigid? Why does the brace work? Yes; the brace makes two rigid triangles.

Activity 2: Observing

Visit local bridges, towers, or other structures that have exposed frameworks. Examine these structures for ideas you can use when you design and build a bridge later in this project. Record your ideas. Sketch or take pictures of the structures. On the sketches or photos, show where triangles are used for stability. Check students’ work.
Chapter 4 Project: Tri, Tri Again (continued)

Activity 3: Investigating
In the first activity, you tested the strength of two-dimensional models. Now investigate the strength of three-dimensional models.

Use toothpicks or craft sticks and glue to construct a cube and a tetrahedron (a triangular pyramid).
- Which model is stronger? **tetrahedron**
- Describe how you could strengthen the weaker model. **Sample: You could add in diagonals of the cube. Check students’ work.**

Use toothpicks or craft sticks and glue to construct a structure that can support the weight of your geometry book.

Finishing the Project  **Check students’ work.**
Design and construct a bridge made entirely of glue and toothpicks or craft sticks. Your bridge must be at least 8 in. long and contain no more than 100 toothpicks or 30 craft sticks. With your classmates, decide how to test the strength of the bridge. Record the dimensions of your bridge, the number of toothpicks or craft sticks used, and the weight the bridge could support. Experiment with as many designs and models as you like—the more the better. Include a summary of your experiments with notes about how each one helped you improve your design.

Reflect and Revise
Ask a classmate to review your project with you. Together, check to be sure that your bridge meets all the requirements and that your diagrams and explanations are clear. Have you tried several designs and kept a record of what you learned from each? Can your bridge be stronger or more pleasing to the eye? Can it be built using a more efficient design? Revise your work as needed.

Extending the Project
Research architect R. Buckminster Fuller and geodesic domes. Design and build a geodesic structure, using toothpicks or other materials.
Chapter 4 Project Manager: Tri, Tri Again

Getting Started
As you work on the project, you will need a sheet of cardboard, a stapler, 100 toothpicks or 30 craft sticks, and glue. Keep this Project Manager and all your work for the project in a folder or an envelope.

Checklist
☐ Activity 1: cardboard frames
☐ Activity 2: observing bridges
☐ Activity 3: three-dimensional models
☐ toothpick bridge

Suggestions
☐ Push or pull the models only along the plane of the frame.
☐ Look for small design features that are used repeatedly.
☐ Use glue that is strong but quick-drying.
☐ Test small parts of the bridge before building the entire structure. Also, decide in advance in what order you will assemble and glue the different sections.

Scoring Rubric
4  The toothpick bridge meets all specifications. The diagrams and explanations are clear. Geometric language was used appropriately and correctly. A complete account of the experiments was given, including how they led to improved designs.

3  The toothpick bridge meets or comes close to meeting all specifications. The diagrams and explanations are understandable but may contain a few minor errors. Most of the geometric language is used appropriately and correctly. Evidence was shown of at least one experimental model prior to the finished model.

2  The toothpick bridge does not meet specifications. Diagrams and explanations are misleading or hard to follow. Geometric terms are completely lacking, used sparsely, or often misused. The model shows little effort and no evidence of testing of preliminary designs.

1  Major elements of the project are incomplete or missing.

0  Project is not handed in or shows no effort.

Your Evaluation of Project  Evaluate your work, based on the Scoring Rubric.

Teacher’s Evaluation of Project
